FOREWORD

THERE have been many single-volume encyclopaedias published during the past few years, but this book, we believe, is devised on an entirely new plan. It gives, in one volume, answers to innumerable questions that arise every day, and provides the ordinary man with those facts and figures which are essential to him both in his private and his public life. We are naturally unable to give all the information which an encyclopaedia in many volumes can contain, but the essential details are here, together with a mass of information that is not to be found in any other single book of reference.

Special attention has been paid to questions of the day ; statistical tables and diagrams are given, showing the latest figures for most of the large industries and countries of the world. Other features are surveys of the world's sciences, arts, literatures, and religions, geographical information, accounts of modern movements, historical events, sports and achievements, with biographies of men and women of importance in all the manifold spheres of human activity.

The illustrations are a special feature of the work, and have been chosen, not because they make the work look more attractive, nor because it was decided there must be so many illustrations on a page, but because each has a special interest, elucidates some important point, or is in other ways instructive. The more important maps are given in colour, and many others, including plans of large towns and special areas at home and abroad, are among the text illustrations. A colour plate of the flags of Great Britain, of the Empire, and of the principal countries of the world, has been added.

In order to be able to present this enormous amount of detail in one volume, we have had to use abbreviations throughout, but a glance at the list of Abbreviations on pp. vii-viii, and especially at the note that precedes it, will show the plan we have adopted.

The book has been compiled by a large staff of editors, each an expert in his own subject, and we would take this opportunity of thanking them for their care and patience.

The illustrations have been collected from numerous sources, and thanks are due to many corporations, private firms, and individuals who have freely given us permission to use their photographs or sketches. The graphs, diagrams, statistical tables, and very many drawings have been specially prepared for this book.

LAWRENCE H. DAWSON
(*Editor-in-Chief*).

ABBREVIATIONS

As has been mentioned in our Introduction, besides the abbreviations ordinarily employed in works of reference, we have made use of a number of contractions with the object of devoting our space to the best possible advantage for the reader; practically all of these are well known as "press-contractions," and they will in every case be readily understood both from the visual combination of letters and from the context. By way of example:—"acc.," "betw.," "gen.," "leg.," "pee.," "shld.," "thr.," stand for "according" or "account," "between," "general" or "generally," "legal," "peculiar," "should," and "through," respectively; and such terminations as "-ing," "-ion," "-ment" are frequently contracted, as in "containing," (or "contg.") for "containing," "mentn." for "mention," and "docmnt." (or "docmt.") for "document."

Contractions such as these are omitted from the following list, as also are a number of general abbreviations, such as those for the names of the months (Jan., Feb., etc.), Books of the Bible (Gen., Exod., etc.), the titles of Shakespeare's plays, service ranks (Col., Lieut., etc.), and designations of Orders, etc., as "K.C.M.G.," "C.H." Most of these latter, however, and a large number of other abbreviations are explained in the main body of the work; here we have confined ourselves mainly to those abbreviations that are used with a directional, not with a textual, purpose.

A main heading, when it recurs in the same article, is as a rule represented by its initial letter; thus:—"PIACENZA, . . . cap. of prov. P." reads, "PIACENZA, . . . the capital of the province of Piacenza"; and similarly under "PICCADILLY"—"P. Circus, space terminating E. end of P. . . ." reads, "PICCADILLY CIRCUS, the space terminating the east end of Piccadilly. . . ."

Art, history of. The first records of the artistic activities of man date from prehistoric times, animal-drawings of remarkable skill (perh. of magic or votive significance) being found in caves in S. France, N. Spain and (1932) Palestine. Excavations at Ur have established Mesopotamia as probable seat of the earliest civilization, the art of the Sumerian inhabitants (sculpture, metal-work, inlay) being highly developed, if not decadent, by 3500 B.C. Egyptian art, from about 3000 B.C., shows traces of Sumerian influence; it is mainly monumental and conventional, connected with funeral ceremonies (pyramids, mummy cases, Book of the Dead) and the glorification of royal dynasties (statues), but shows also examples of realism.

Mycenaean Vase Ornament

In Assyrian art, deriving from Sumerian through Babylonian, convention and realism mingle (bas-reliefs: Lion Hunt). Contempo-

rary Aegean culture (Crete, Mycnae) had contacts with Egypt, but developed individual art-forms. Greek art was at first strongly influenced by Egypt, being hieratic and conventional; but by the 5th cent. B.C. it was characterized in architecture (Doric, Ionic, and Corinthian orders) and the minor arts (vases, figurines) by grace and proportion, and in sculpture by recognition of the beauty of the human form (Pheidias, Myron): the earliest art not entirely dominated by ritual or dynastic ideas; Greek painting (apparently naturalistic) not now

extant. Decadence resulted in the prettiness of Praxiteles, and after Alexander's conquests Hellenistic art in Alexandria and Asia Minor was a mere uninspired imitation of Greek. So also was Roman, in which the dynastic motive was revived in idealized busts of the Caesars. Rome excelled in massive architecture, planned for utility and permanence rather than beauty. With the official recognition of Christianity and the transference of the capital of the Empire to Constantinople (Byzantium) (3rd-4th cent. A.D.)

Greek Vase Ornament, Classical Period

Byzantine art developed, relig. in character and semi-oriental in spirit and form; characterized by elaborate mosaics (St. Sophia, Constantinople), metal-work and illuminations. The arch supplanted the architrave

Pompeian Ornament

in building. Hence developed the Romanesque style, in which the earliest churches of W. Europe were built, the English Norman (Tower of London, Peterborough Cathedral)

Gothic Ornament

being a variation of it. In the 12th cent. the Gothic style developed in France and spread to other countries (Chartres, York, Cologne, Milan, Toledo), the pointed arch

replacing the round, with magnificent sculpture, increasing in freedom and realism, but degenerating by the 14th cent. into over-elaboration. Italian architecture developed on separate lines and Spanish showed Moorish influence. Wall-painting (tempera) began in Italy in the 13th cent. at Siena (Duccio, Simone Martini) and a little later at Florence (Cimabue, Giotto), where a great succession of relig. painters culminated in Fra Angelico. From the 14th cent. painting also flourished in Germany and Flanders, whence oil-painting, supposed to have been first employed by Hubert and Jan van Eyck, was introduced into Italy. In the 15th cent. the revived knowledge of classical art and literature, following the capture of Constantinople by the Turks in 1453, and dispersal of its treasures, produced the Italian Renaissance, and art, though still largely relig. in subject, often pagan in temper became influenced by science and learning. Masaccio introduced naturalism and Botticelli classical and allegorical subjects. Anatomy and perspective were studied, and the human form, for the first time since the great age of Greece, became the centre of interest. In painting Leonardo da Vinci, Michelangelo, and Raphael, in sculpture Michelangelo and Donatello, were the predominant figures. Venice produced a great school of colourists (Titian, Veronese, Tintoretto) who influenced and were rivalled by Rubens in Flanders. In architecture the classical orders were revived by Brunelleschi at Florence, Bramante at Rome, and Palladio at Venice, and soon spread to other countries, being adopted in England by Inigo Jones (Banqueting Hall, Whitehall) and Wren (St. Paul's) and in France by Mansart (Versailles). For public buildings the classical style was used down to the 19th cent., but after the Renaissance both England and France developed a characteristic domestic architecture. In the 16th cent. Germany produced two great painters (Dürer and Holbein); France, some exquisite ones (the Clouets) and excelled in decorative art (Bernard Palissy); and Spain, El Greco and Velazquez, whose portraits strike a new psychological note. England, whose medi-

Baroque Ornament

eval illuminators had been unrivalled, had as yet no native school except of miniaturists (Hilliard, Cooper), but Holbein, and later Rubens and Vandyck, worked there. In the 17th cent. Renaissance magnificence degenerated into the exaggerated and rhetor-

cal Baroque (*q.v.*), but France had two great classical landscape-painters, Poussin and Claude, and Holland many admirable painters of landscape (Hobbema, Ruysdael) and *genre* (Vermeer, De Hoogh)—the first school not catering mainly for ecclesiastical or aristocratic patrons—a distinguished portrait-painter, Hals, and in Rembrandt a very great artist whose pictures are the first pre-eminently to express the painter's personality. In Flanders the outstanding figures after Rubens were Vandyck and Teniers. In the 18th cent. France, freed from the pompous official style imposed by Louis XIV (Le Brun, Rigaud), gave birth to an idyllic art (Watteau and Lancret), more artificially developed by Boucher, also a fine portrait-painter, and Fragonard. Chardin excelled in *genre*, and portraits were painted by Nattier and La Tour; while Houdin was a sculptor of outstanding excellence. In England the first great native painter appeared in Hogarth, to be followed by the portraitists (Reynolds, Gainsborough,

Rococo Ornament

Romney) and landscape-painters, though the greatest of the latter belong mainly to the 19th cent. (Constable, Turner, Crome). In Italy, Venice alone produced painters of distinction (Canaletto, Guardi, Tiepolo). Towards the end of the 18th cent. French painting degenerated into sentimentalism (Greuze), but the Revolution produced a neo-classical revival (David, Ingres) which left its mark also on furniture, dress, etc. This was challenged by a romantic movement (Delacroix, Géricault) and a little later by the Barbizon school of poetic landscape (Corot, Millet, Daubigny). Realism, magnificently exemplified in Spain by Goya, was represented by Courbet and with a bias towards the grotesque by Daumier. The Impressionists (Manet, Monet, Degas, Renoir), influenced by their predecessors and also by Constable and Turner, carried realism a step farther, seeking especially the exact rendering of effects of light. Allied with them was the sculptor Rodin. England, after the decline of the portrait and landscape schools (Lawrence, d. 1830; Constable, 1837), was dominated by a school of sentimental and trivial *genre* painters (Wilkie, Mulready, Frith). Against this, the Pre-Raphaelite movement (Holman Hunt, Millais, Rossetti) was a protest; the P.-R. Brotherhood was founded in 1848, but only Hunt remained consistently true to its ideals, Millais, a superb craftsman, reverting to a more

academic style, and Rossetti developing an idiosyncratic romanticism which greatly influenced Burne-Jones and William Morris. Another painter of marked individuality, who put his art to the uses of moral allegory, was G. F. Watts. In architecture neo-Gothic succeeded to the classical, and a decorative sculptor of unique genius, recalling the great men of the Renaissance, appeared in Alfred Stevens. Towards the end of the 19th cent. the influence of French Impressionism began to be felt in England, especially on the group of painters forming the New English Art Club (Sickert, Steer). Another influential figure was Whistler, an American who had worked with the Impressionists in Paris (living afterwards in England), and, besides having much in common with them, learned much from Japanese art. In more recent times the most vital art movements have all arisen in France, though Italy produced the anarchic and short-lived Futurism. The analytical realism of the Impressionists was succeeded by a search for solidity and simplification (Post-Impressionism: Cézanne, Gauguin, van Gogh; and Cubism: Picasso, Braque). There have been many extravagances, but among the younger French painters there are many fine and sincere artists (Derain, Utrillo, Vlaminck, the sculptor Maillol). England also has many individual artists of distinction (John, Brangwyn, Epstein). Meanwhile, a new architecture has been developed to express the modern spirit in appropriate materials, most strikingly illustrated in the sky-scrapers of America, but increasingly in evidence in London (*e.g.*, Unilever House, Shell Mex and *Daily Express* offices). In architectural design Sweden and Holland have recently shown special excellence.

Assay, quantitative chem. analysis (*q.v.*) of a metal or mineral. **A. balance**, spec. sensitive balance with small pans. **A.-ton**, measure of weight used in assay (*q.v.*) of minerals; contains as many milligrams (32,670, *i.e.*, 1.151 oz. av.) as the ton contains troy ounces.

Assaye, Battle of, decisive victory of Brit. forces under Wellesley (Duke of Wellington) over Mahrattas, 23 Oct., 1803, near vill. of that name, Hyderabad, India.

Assayer, official at mint who applies chem. tests to bullion and coin.

Assembly, (tech.) final putting together of machinery or other complicated appar. from finished component parts.

Asser, Eng. monk, fl. 9th cent., renowned for his learning; lived at Court of Alfred the Great; a Latin life of Alfred has been ascribed to him, but authorship is doubtful.

Assessor, 1) one apptd. to fix amt. of taxes payable by pers. or societies; 2) (insur.) pers. who estimates compensation payable in cases of loss by fire.

Assets and liabilities, items making up amt. of property owned and amt. owing; must be shown in balance sheet of limited companies, banks, etc.

Asshur: *see* **AS-SYRIA**.

Assignats, paper money of Fr. Rev. 1790-96; 45,000,000,000 francs issued; became worthless, largely owing to forgeries.

Assignment, (commer.) written instruction to hand over to a 3rd party money, securities, or goods.

Assimilation, (physiol.) the changing of food into the tissues of the body.

Assisi, tn. in Umbria, cent. Italy, 15 m. E. of Perugia; pop., 19,000; birthplace of St. Francis.

Assiut: *see* **AS-SYUT**.

Assizes, courts for trial of civil and crim. cases, held in chief prov. tns. by a travelling judge of Kg.'s B. Division.

Associated Powers, 23 States wh. joined Allied Powers (Eng., Fr., and Russ.) in

World War. Co-signatories of the Treaty of Versailles (*q.v.*).

Association, union. **A. of ideas**, involuntary sequence of thoughts, in wh. one idea suggests the other, by reason of some former connection.

Association Cup, prize inaugurated by the Eng. Football Association in 1872 to be competed for annually by Assoc. Football teams on the knock-out principle; the competition has steadily grown in popularity and number of entrants; won by professional teams since 1885; final tie—the "Cup Final"—has been played at Wembley Stadium since 1923.

Assonance, imperfect rhyme in wh. accented vowel sounds correspond, but not consonants, *e.g.*, "joker" and "sober."

A.S.S.R., abbr. Azerbaijan Socialist Soviet Republic.

A.S.S.T., abbr. Autonomous Soviet State of Tajikistan.

A.S.S.U., abbr. American Sunday School Union.

Assuan: *see* **ASWAN**.

Assumption of the Virgin Mary, R.C. Feast (Aug. 15th), commem. taking up of Mary's body into Heaven.

Assumptionists, congregation of Augustinian friars (*q.v.*) whose chf. object is to promote reunion of Eastern Churches with R.C.Ch.; founded 1847.

Assyria, ancient Mesopotamian kingdom, formed *c.* 2000 B.C.; later became an empire; named after cap., Assur; cap. in 7th cent. B.C., Nineveh; overthrown by Medes and Chaldeans (612 B.C.). Last important Kg., Ashur-bani-pal, 668-626 B.C.

Assyrian Art, allied to Babylonian Art. Chief monuments: Ruins of the Anu and Adad temples at Assur (*c.* 1000 B.C.); statue and obelisk decorated with reliefs of Ashurnasir-pal II; Obelisk of Shalmaneser III (both Kgs., 9th cent. B.C.); alabaster reliefs of Sennacherib and Ashur-bani-pal from Nineveh (7th cent.); scenes of war and hunting, cherubim, colossal winged lions and bulls; reliefs in glazed tiles. Most A. antiquities in London, Paris, and Berlin. **A. language**: *see* **LANGUAGE SURVEY**, *E. Semitic*.

Assyriology, study of Assyro-Babylonian antiquity (cuneiform script, etc.).

Astarabad: *see* **GOREKAN**.

Astarte, Syro-Phoen. goddess of Love and Fertility. *See* **ISHTAR**.

Astatic, (phys.) uninfluenced by position or orientation. **A. galvanometer** has moving magnet-system so constructed as to be uninfluenced by earth's magnetic field.

Aster, China A. (*Callistephus*), favourite autumn-flowering garden plant. The

Assignat

Aster

Sea Aster or Starwort (*A. tripolium*) grows 30 in. high, has a handsome purple and yellow flower.

Asteroids: see PLANETOLDS.

Asthenia, bodily weakness. **Asthenic type**, slightly built, slender, weak.

Asthma, difficulty in breathing, accomp'd. by cough and feeling of suffocation. *Cardiac A.*, A. due to heart disease.

Asti, Ital. tn. and epis. see (pop. 25,000) in prov. of Alessandria; noted as b.-place of Alfieri, and for its sparkling wine (*A. spumante*).

Astigmatism, defect in shape of the cornea or crystalline lens whereby the eye is rendered unable to focus objects clearly. May be corrected by suitable spectacles.

Aston, Francis Wm. (1877-), Eng. chem.; Nobel Prize (Chem.), 1922; author: *Isotopes*.

Aston, formerly a mun. bor. N.E. of Birmingham, Warwicksh., Eng.; since 1911 united with Birmingham; residential and industrial.

Aston Villa, Eng. Association Football club, fndd. at Villa Cross, Birmingham, 1874; became professional 1897; has ground at Aston; won Assoc. Cup 1887, '95, '97, 1905, '13, '20, and League Championship 1894, '96, '97, '99, 1900, and 1910.

Astor, John Jacob (1763-1848), Amer. merchant of Ger. origin; went to U.S.A., 1783; establd. himself in fur trade and acquired his own fleet of ships, setting up trading posts along Missouri and Columbia rivers; endowed Astor Library, New York. **A., Nancy Witcher** (1879-), b. in Virginia; m., 1906, as 2nd husband, 2nd Visc. A.; first woman to sit in Brit. H. of Commons, 1919. **A., Waldorf** (1879-), 2nd Visc., son of Wm. Waldorf A.; Brit. politician; reprinted. Plymouth in H. of Commons, 1910-19; acquired *Observer* newspaper, 1915. **A., William Waldorf** (1848-1919), 1st Visc., Amer. polit. (1877-81); U.S. min. to Italy; naturalized as Brit. subject, 1899; newspaper proprietor (*Pall Mall Gazette*); created Baron, 1916, Viscount, 1917.

Astragalus, bone of ankle supporting bone of leg or tibia.

Astrakhan, the curly-piled pelt of newborn Pers. lambs obtd. from Cent. Pers.; an imitation made from plush.

Astrakhan, 1) prov. of Russian S.F.S.R., near mouth of Volga, on Caspian Sea; 10,800 sq.m.; pop., 576,800; 2) tn., admin. centre of Kalmuck auton. area; Russia's largest inland port; pop., 195,200; fishing; export of caviare.

Astral, pertaining to the stars. **A. body**, (theos.) a 2nd human body consisting of highly rarefied form of matter, usu. invisible. **A. world**, (occult.) stellar space, supposed to be occupied by spirits of the dead.

Astringent, (med.) substance wh. causes contraction of tissues and mucous surfaces, thus checking discharges and secretions.

Astrolabe, obsolete astron. instrument for ascertaining positions of the heavenly bodies; kind of primitive sextant. **A. Bay**, bay in E. of New Guinea (mandated territory).

Astrology, pseudo-scientific study of the stars, by wh. it is claimed that a man's character and fate are determined by the relative position of the stars at a given hour, usu. that of birth; see HOROSCOPE.

Astronomy, scientific observation of entire universe beyond limits of earth's atmosphere; divided into *Astrometry*, wh. is A. in its strictest sense and deals with dimensions and movements of heavenly bodies and their relation to one another, and *Astrophysics* (*q.v.*), wh. deals with their physical properties. Astrometry divided into *Theoretical A.*, wh. by mechanical and geometric means calculates and deduces the positions and movements of heavenly bodies; and *Practical A.*, concerned with astronomical instruments, the principles of their use, and application of laws of light to astron. observation.

INSTRUMENTS: *Equatorial Telescope*, revolves on axis parallel to that of earth and so follows a star in its motion; *Refractor*, a telescope with a concave mirror wh. renders rays of light convergent and forms an image magnified by the eye-piece; *Reflector*, wh. deflects rays of light in required direction; *Transit Circle*, by wh. the altitude, ascension and declination of a star are determined; *Spectroscope*, wh. analyses spectra of rays emitted by luminous bodies; *Photometer*, wh. measures and compares the intensity of light emitted by different bodies; *Photographic Cameras*.

ASTRON. OBSERVATORIES: best situated outside a town and in climate favourable for observation (e.g., California, S. Africa), often on a mountain (e.g., Mt. Wilson, Cal.).

HISTORY: A. the oldest of the sciences; in 3rd millennium B.C. the Chinese determined the solstices and equinoxes; as early as 2000 B.C. Assyrians, Babylonians, and Egyptians could calculate occurrence of eclipses of sun and moon; Gr. A. began in 7th cent. B.C.; Eratosthenes establd. obliquity of the ecliptic (*q.v.*) and made fairly accurate calculation of size of earth; most imp't. ancient astronomers were Hipparchus and Ptolemy; Arab astron. derived from Gr., flourished 9th-10th cents. A.D., provided many astron. terms still in use (e.g., azimuth, alidade, nadir, zenith) and names of stars (e.g., Altair, Aldebaran); founder of mod. astron. Copernicus, who, 1543, proved the sun to be centre of the planetary system; Tycho Brahe developed high degree of accuracy in measuring movements of celest. bodies; Kepler formulated laws of motion; Galileo developed mechanics

of astron. observation; Newton related laws of motion with his discovery of laws of gravity; 19th cent. saw development of astron. technique, introduction of spectro-scope and photography; 20th cent., statistical methods, close relation of astron. with physics, esp. physics of atoms.

Apparent rel. position of the stars in the heavens usu. shown by means of celestial spheres, i.e., cartographical representations (either in the round or on a plane surface) of the N. and S. celestial hemispheres, on wh. stars are repd. accdg. to their position and magnitude. (See Pl., ASTRONOMY, in wh., owing to overlapping of marginal zones, the outer stars are shown on both charts.) For orientation, hold the chart of the northern celestial hemisphere northward and when finding the constellations begin with the North Star (q.v.). Astronomical position of a star is determined in relation to its co-ordinates, i.e., position of observer, centre of earth, centre of sun, etc.; also by reference of its lat. and long. to the ecliptic, or of its declination and right ascension to the equinoctial (see separate headings).

Astrophotometry, calculation of comparative brightness of heavenly bodies.

Astrophysics, branch of astronomy dealing with the physical and chem. properties of planets and stars by observation of the spectrum (q.v.) and its emanations. Cf. ASTRONOMY.

Asturias, former prov., N.W. Sp., on B. of Biscay; since 1833 Oviedo (q.v.). Establ. as kgdm. c. 718, united with León (q.v.) in 10th cent. **Prince of A.**, title of heir to throne of Sp., 1388, until abolition of monarchy, 1931.

Astyages, last Kg. of Media, conq. by Cyrus (q.v.), 559 B.C.

Asunción, cap. and port of Paraguay, on left bank of Riv. Paraguay; pop., 102,000; leather, tobacco, sugar.

Aswan, tn., on right bank of Nile, in Upper Egypt, opposite Isl. of Philæ; pop., 13,000; health resort; dam completed, 1902.

Asylum, (law) any refuge or place of security. **Right of A.** is granted to polit. offenders, refugees from other States, at discret. of Home Secretary.

Asymmetry, non-correspondence of the two sides of a fig. or body. Ant.: *Symmetry*.

Asymptote, (geom.) a straight line which constantly approaches a curve, but does not meet it within finite space. May be defined as tangent to a curve at infinity.

Asynchronous, contrary of synchronous (q.v.). **A. motor**, elec. motor (q.v.) with short-circuited armature, driven by multi-

phase (usually three-phase) elec. current, the induced armature currents not being in synchronism with the supply.

Asyut, *Assiut*, cap. of Upper Egypt, in prov. A. on Nile; pop., 57,000; Nile barrage to regulate irrigation.

A t., (mus.) abbr. *a tempo* (It.), revert to original time.

Atacama, 1) desert, Chile; salt deposits, salt lakes, volcanoes; 2) prov.; area, 30,770 sq.m.; pop., 64,000; cap., Copiapo; gold, silver, copper.

Atalanta, (Gr. myth.) fleet-footed Arcadian maiden who undertook to marry her conqueror in running; Milanion dropped three golden apples during the race, Atalanta paused to pick them up, and she was beaten. She accompanied the Argonauts (q.v.) and took part in hunt of Calydonian boar (q.v.).

Atavism, reversion; appearance of ancestral but not parental characteristics in a descendant.

Ataxia, inco-ordination of movements due to certain diseases of brain or spinal cord.

Atbara, or *Black Nile*, riv. (785 m.), N.E. Africa; last trib. of the Nile; rises Abyssinia; brings down silt; floods in July-Sept.; joins Nile at *Albara* (Anglo-Egypt. Sudan). **Battle of A.**, victory of Brit. and Egypt. forces, under Kitchener, over dervishes, under Mahmud, 4 Apr. 1898.

Atchison, tn., Kansas, U.S.A.; on Missouri Riv.; pop., 13,000; St. Benedict's (R.C.) College; flour mills; grain and lumber; fndd. 1854, by pro-slavery groups, led by David R. Atchison, U.S. Senator. **A., Topeka and Santa Fé Railway**, U.S.A., connects Kansas and New Mexico States with Chicago, San Francisco, and Galveston; 9,630 miles.

Ate, 1) (Gr. myth.) goddess of mischief and, later, of vengeance; expelled from Olympus, lived among men; followed by *Lilai* (prayers), who were ready, when besought, to remedy the mischief done by her. 2) A slanderous hag in Spenser's *Faerie Queene*.

Atelier (Fr.), studio, workshop.

Atellan Farces, *Ludi Osci*, native rustic comedy, farce, or burlesque performed at Atella, Campania in early Roman times; not based on Gr. models.

A tempo, (mus.) return to the previous tempo; in strict time.

A tergo (Lat.), from behind.

Athabaska, 1) riv. (750 m.), Alberta, Canada; rises Rocky Mts., flows generally N. into Lake A. 2) Lake, Alberta and Saskatchewan, Canada; 3,085 sq.m.; outlet, Slave River. See also MACKENZIE RIVER.

Athalia, oratorio by Handel (q.v.), 1738.

Athaliah, (O.T.) dau. of Ahab and Jezebel, wife of Jehoram, Kg. of Judah; on death of her son, Ahaziah, caused all but one of her

grandchildren to be massacred and usurped throne; d. c. 836 B.C.

Athanasian Creed: *see* CREED.

Athanasius, St. (295-373), Father of Church, Patriarch of Alexandria; defndd. orthodox faith agst. Arius (*q.v.*). Outstanding leader in difficult period of early Church; commm. May 2nd.

Atheism (Gr.), negation of existence of God.

Atheling: *see* AETHELING.

Athelney, low-lying area nr. junction of rivs. Tone and Parrett, Som., Eng., formerly surrounded by marshes; Kg. Alfred said to have retreated here, 878; Alfred Jewel (*q.v.*) found here.

Athelstan (c. 895-940), son of Edward the Elder, Kg. of Wessex and Mercia; defeated Danes, Welsh, and Scots at Brunanburh, 937, and became overlord of all England.

Athenæum, in anc. Gr., temple of Athene, now literary club or society; most famous, **A. Club** (London, Eng.), fndd. by Sir Walter Scott and Thomas Moore (1824).

Athena, *Athene*, Gr. goddess of wisdom; Rom. Minerva; protectress of the Arts, sprang fully armed from head of Zeus; her attributes are the owl and serpent. *A. Parthenos*: the maiden. *Pallas A.*: the lance-wielder.

Athens, cap. of Greece, built on series of low hills in centre of Attic Plain, 4 m. from Phaleron Bay in Gulf of Aegina; pop., 452,900; extends S. and S.W. to port of Piræus (trading, shipping, and commercial centre), S.E. to *Mt. Hymettus*, N. to Patisia, and N.E. beyond *Mt. Lycabettus* (910 ft.). **ANTIQUITIES:** Acropolis (*q.v.*), with Propylæa, Parthenon, Erechtheum; Theatre of Dionysus; Stadium; Theseum; Areopagus; Ceramicus, etc. Nat. Museum; Brit., Amer., Fr., Gr., etc., archaeological schools; Univ. **HISTORY:** Acropolis fndd. by Cecrops (?c. 1581 B.C.), Lower City by Theseus; last absolute king, Codrus; archonship instituted 1088; reforms of Solon, 594. After abortive attempt by Cylon (632), tyranny estab. by Pisistratus (560), lasting until the deposition of his son, Hippias (510), ushered in era of democracy. After Persian Wars (Marathon 490, Salamis 480, Plataea 479) A. assumed leadership of Gr. world and gained command of the sea, with institution of Confederacy of Delos. Under Pericles (460-29) were built the masterpieces of Gr. architecture. Peloponnesian War (431-404) ended in downfall of Athens and temporary reinstatement of Sparta. 4th cent. period of culture (Plato, Xenophon, Isocrates). New danger from Macedon unheeded, despite warnings of Demosthenes; decisive victory of Philip of Macedon at Chaeronea in 338. Aristotle

Pallas
Athene

taught at the Lyceum, 335-23. Macedonian rule exchanged in 168 for Roman, A. retaining certain privileges as seat of learning. St. Paul preached in or nr. Areopagus in A.D. 54. City embellished by Hadrian 120-18. Schools of philosophy suppressed by Justinian, 529. Under Latin dukes, 1205-1308, and after succession of Christian rulers, seized by Turkey, 1458. Parthenon damaged in Venetian bombardment, 1687. After War of Independence (1821-30), A. became cap. of Greece in 1834.

Atheroma, (med.) 1) a sebaceous cyst; swelling filled with a cheese-like substance; gen. formed on the scalp; 2) degeneration of walls of arteries, occurring in old age.

Athletics, any form of physical exercises, esp. contests in running, hurdling, and walking, (*track A.*), jumping (long and high), pole-vaulting, weight-putting, hammer, javelin and discus throwing (*field A.*). *See under sep. sports.*

Atholl, territorial dist. of Perthsh., Scotland.

Athos, 1) (*Agion Oros*), mtnous. peninsula, Macedonia, Greece, extending into the Aegean. 2) Mtn., at end of peninsula, 6,000 ft., famous community of Gr. Orthodox monks.

Atlanta, cap., Georgia, U.S.A.; pop., 270,400; educ. centre: Georgia inst. of technology; Emory univ.; Atlanta univ. for coloured students; airport; commerc. centre; manuf. cotton, furniture, and machinery. Scene of fighting in Civil War, 1864.

Atlantic City, seaside resort of New Jersey, U.S.A.; pop., 66,200; the "Boardwalk," 60 ft. wide, extends 8 m. on sea front.

A. Coast Railroad, U.S.A., connects states of Virginia, N. and S. Carolina, Georgia, Florida, and Alabama; 5,157 miles. **A. Highway**, from Calais, Maine, to Miami, Florida, U.S.A., 2,240 m.; connects with historic places of the 13 original states; borders the Atlantic for much of its course; much fine scenery. **A. Coastal Highway**, follows much the same course, except in Virginia and Georgia. **A. Ocean**, part of ocean betw. Old and New Worlds, Europe and Africa in E., N. and S. America in W. Mean depth, 12,900 ft.; est. area, c. 31,525,000 sq.m. **A.-Pacific Highway**, from New York City to San Diego, California, U.S.A.; abt. 3,000 m.

Atlantis, legendary island in Atl. Ocean, said to have been submerged; Plato's *Timæus* and *Critias* contain the germ of the theory, wh. later became assocd. with traditions of an "earthly paradise."

Atlas, 1) (Gr. myth.) a giant who supported the heavens and (later) the earth. 2) Volume of maps.

Atlas Mountains, series of ranges

Atlas

(1,500 m.), N.W. Africa, extending from W. Morocco to Tunisia. Three main parallel ranges in Morocco: *Great Atlas* (av. height, 11,000 ft.; Tizi n'Tagharat 15,000 ft.), with *Anti Atlas* (5,000 ft.) to S. and *Middle Atlas* (c. 7,000 ft.) to N. Two parallel ranges in E., *Maritime* or *Tell Atlas*, from Span. Morocco (*Rif Mts.*) through Algeria (*Jebel Jurjura*, 7,550 ft.) into Tunisia; *Saharan Atlas* to S. (*Jebel Aures*, 7,640 ft.). Betw. these two ranges are plateaux with salt lakes (*Shott*) and pastures (alfalfa). See ALGERIA.

Atlas powder, explosive for blasting; mixture of nitroglycerine with wood-pulp or sawdust and sodium nitrate.

Atmo., (phys.) abbr. atmosphere.

Atmosphere, gaseous envelope of the earth, the air (*q.v.*). Divided, acc. to density, composition, and phys. processes, into: *Troposphere*, extending from surface upwards about 6 m. at the Poles and 10 m. at the Equator; realm of phys. phenomena (wind, clouds, thunderstorms) and *Stratosphere*, which is of same composition as T. but has no vertical currents of air and an almost constant temp.; abt. 40 miles thick. Above these two regions containing nitrogen is a very rarefied layer of hydrogen, where the *Aurora Borealis* (*q.v.*), shooting stars, and meteorites become visible; small but important percent. of ozone at height of about 3.0 miles.

Atmospheric (barometric) pressure, exerted by wt. of column of air above unit area (abt. 15 lbs. per sq. in. at sea level). This pressure diminishes with incr. in height, and depends also greatly on weather (see DEPRESSION, CYCLONE). It is measured by barometers (*q.v.*) and usu. expressed as height of a mercury column exerting an equal pressure on unit area, e.g., abt. 30 in. at sea level. **A. electricity**, properly potential diff. betw. earth's surface and atmosphere; in gen. all elec. phenomena in atmos., e.g., lightning, *Aurora Borealis*, St. Elmo's fire; air is positively charged with respect to surface of the land and sea.

At. no.,
abbr. atom-
ic number:
See ATOM.

Atoll

Atoll, coral isl.; belt of coral-reef surrounding a lagoon.

Atom, smallest particles of chem. elements. Accdg. to most recent theories, atoms consist of a nucleus with a positive elec. charge, round wh. revolve negative electrons, like planets round a star. All atoms are alike, differing only in numbers of their nuclear charges, which corres. to number of negative electrons. Number of nuclear charge = ordinal number of element in the

periodic system (*q.v.*). **Atomic weight** of an element = numerical ratio of the elem. to Oxygen, taken as an arbitrary unit, i.e. 16.00. **Atomic transmutation**, changing of one element into another; goal of the old alchemists; occurs in nature by decomposition of *radio-active* elements (*q.v.*). **Atomic volume**, content of a *gramme-atom* (*q.v.*) of an element in a solid state at a temp. of 0°C., expressed in c.cm. **Atomic heat**, specific heat (*q.v.*) of a *gramme-atom*; in all metals, = 6.4 accdg. to law of Dulong-Petit (*q.v.*). **A., splitting of the**, artific. transmutation of atoms (Rutherford, 1921) by bombardment of elements (up to present, only boron, nitrogen, fluorine, sodium, aluminium, and phosphorus), with alpha rays (positively charged helium atoms of high velocity); nuclei of the atoms give off hydrogen nuclei, and change into elements one ordinal number lower in the periodic system.

Atomizer, spraying appliance for liquids: 1) centrifugal, e.g., for drying milk; 2) air pressure, e.g., scent A.; inhaling devices; internal combustion engines; 3) steam pressure; 4) effervescence.

Atonal, (mus.) without established tonality or key.

Atonement, Day of, (Hebr.: *Yom Kippur*) 10th day of Jew. New Year, a solemn day devoted to fasting and prayer (Lev. xvi, xxiii, etc.). See REDEMPTION.

Atony, (med.) slackness of muscles, tendons, and tissues; congenital or caused by illness and lack of exercise.

À tout prix (Fr.), at any price, at all costs.

Atrebrates, Belgic tribe living in territ. of modern Artois; subdued by Julius Caesar, 57 B.C., and conquered by Franks in 5th cent. One branch of tribe settled in S. Britain.

Atreus, legend. Gr. Kg., grandson of Tantalus (*q.v.*). His sons, the **Atrides**, were Agamemnon and Menelaus.

Atrium, main apartment or court of house in anc. Rome; in early Christn. churches A. was an open colonnaded court reserved for penitents.

Atropa belladonna: see DEADLY NIGHTSHADE.

Atrophy, wasting of tissues thr. disease, nervous affection, or old age.

Atropine, $C_{17}H_{23}O_3N$, alkaloid obtd. from deadly nightshade (*Atropa belladonna*), used medic. as a nerve stim. and as a mydriatic (*q.v.*); also given to relieve spasmodic asthma.

Atropos, (Gr. myth.) one of the Three Fates (*q.v.*).

Attacca, (mus.) continuing without a break.

Attaché, subordinate official on staff of an ambassador; often (with prefix *commercial*, *military*, etc.) a member of the diplomatic service entrusted with spec. functions.

Attainder, Act of, parliamentary declaration "attainting" (outlawing) a person, used in Mid. Ages for securing destruction of polit. opponents. Employed in banishment of Despensers, 1321; largely used during Wars of the Roses; Thomas Cromwell was attainted in 1540, Strafford in 1641; last case of attainder and execution, that of Sir John Fenwick (1697) for participation in Assassination Plot.

Attar of roses, distilled with steam from petals of roses, esp. in the Balkans and Pers.; 1 oz. requires about 150 lbs. of rose petals; a synth. substitute commonly in use to-day.

Attenuation of signals, in wireless, reduced in strength. Principal cause, disturbance in the Heaviside layer (*q.v.*), wh. reflects signals back to Earth from upper regions of atmosphere.

Atterbury, Francis (1662-1732), Eng. divine and politic.; Bp. of Rochester and Dean of Westminster.

Attic, (archit.) strictly, upper storey of a bldg. above the main cornice; generally, low rooms in a roof.

Attica and Boeotia, prov. and peninsula of Greece. Area, 2,410 sq.m.; pop., 1,025,000. Mtns. *Cithaeron*, *Parnes*, and *Pentelicus* form amphitheatre round Attic Plain, in wh. lies Athens.

Attic salt, elegant wit; **Attica** (Athens), nursery of intellect in antiquity.

Atticus, Titus Pomponius (109-32 B.C.), Roman scholar, friend of Cicero, with whom he corresponded for many years. None of his writings is now in existence.

Attila (c. A.D. 406-453), the "Scourge of God," Kg. of the Huns. Ruled over large part of Europe. Defeated by Aëtius at Châlons, 451 A.D.

Attock, tn. and fort, Punjab, India, at confluence rivs. Kabul and Indus, on border N.W.F.P.; rly. bridge (five spans) over river.

Attorney, one authorised to act for another; esp., before 1873, and since then in popular usage, a solicitor. **A.-general**, chief legal officer of Eng. Crown, a member of the ministry in power. **Letter, or warrant, of A.**, document by which authority is given by a person to another to act for him; **power of A.**, the authority thus conferred.

Attrition, wearing away by friction; (theol.) sorrow for sin arising from fear of punishment; cf. CONTRITION.

Atwood's machine, apparatus for testing and explaining laws of motion and gravity, consisting of cord passing over friction-pulley, having weights on either side,

and means for suddenly removing and replacing them.

At. wt., abbr. atomic weight.

Au (chem.), symbol for Gold.

Aube, 1) dépt., N.E. France, area 2,328 sq.m.; pop., 230,000; cap., Troyes. 2) Riv., trib. of Seine, rises in Langres Plateau, 154 miles.

Auber, Daniel François (1782-1871), Fr. operatic composer: *Masaniello*; *Fra Diavolo*.

Australasia, generic term for Australia (incl. Tasmania), New Zealand, Papua (New Guinea), New Ireland, New Britain, New Hebrides, and New Caledonia. **Australasian Colonies,** obsolete term for Australia and New Zealand.

Australia, smallest continent, Brit. dominion in S. Hemisphere (see also AUSTRALASIA: OCEANIA); bounded on W. by Indian Ocean, on S. by Southern Ocean, and on E. by Pacific; separated on the N. from New Guinea by Torres Strait and from Dutch E. Indies by Arafura and Timor seas, and on the S. from Tasmania by Bass Strait; greatest length, from Steep Point (W.) to Cape Byron (E.), c. 2,400 m.; width from Cape York (N.) to Wilson's Promontory (S.), c. 1,970 m.; area (incl. Tasmania), 2,974,581 sq.m.; pop., 6,439,000 (excluding c. 60,000 Aborigines).

Coast-line uniform (cf. AFRICA), the greatest indentation being Gulf of Carpentaria in the N. Most of the natural harbours are on the E. and S.E. S. coast stormy and inhospitable, Great Australian Bight offering no shelter for 500 m. The principal island is Tasmania (q.v.).

Interior is crossed from N. to S. by *Great Dividing Range*, the edge of a tableland rather than a mtn. chain, which runs roughly parallel and close to E. coast, falling steeply towards the sea and gently inland. *Australian Alps* (7,350 ft.), in the S. of the range, provide the highest summit in Australia. In the centre of A. rises the *MacDonnell Range* (c. 4,000 ft.), in S. Australia are the *Musgrave* (4,500 ft.), *Flinders* (3,100 ft.), and *Lofty* (2,235 ft.) ranges; in S.W., parallel with the W. coast, is another series of ranges (1,500-3,500 ft.); in N.W. of Western A. *Mt. Bruce*, 4,024 ft.

Jane Austen

River system is defective, vast tracts of Central, S., and W. Australia being waterless. Most important riv. is the Murray (q.v.), draining into the Southern Ocean and fed by great tribs., all flowing E. and S. from Dividing Range. E. coast rivs. mostly short and rapid; several important rivs. (incl. the Flinders) flow into the Gulf of Carpentaria. Fitzroy, Ashburton, Gascoyne, Murchison, and Blackwood drain W. Australia. Several rivs. disappear into the earth, others (e.g., Cooper and Diamantina) flow into one or other of the great *Salt Lakes*: Eyre, Gairdner, Torrens, and Frome in S. Australia, L. Amadeus in the N. Territory, and the lakes of the W. Australian goldfields. W. centre of A. is largely desert, incl. the Great Sandy Desert, Great Victoria Desert, and Nullabor Plain.

Climate, temperate, except in the N., is generally dry, about 37% of the area having a rainfall of under 10 in.; but owing to the irregularity of precipitation, droughts and floods alternate. Region E. of Dividing Range has most rain; driest part is region of the S. Australian salt lakes. Vegetation corresponds. E. coast well wooded, with characteristic eucalyptus (some over 300 ft.), jarrah, karri, and gum trees. In the endless bush-country of the plains are found the acacia shrub (wattle), shrub eucalypts, saltbush, and spinifex.

Characteristic *fauna* include the kangaroo, wallaby, wombat, and other marsupials, the ant-eater, and the platypus. Well known birds are the emu, cassowary, lyre-bird, "laughing jackass," black swan, white eagle, parrots, and cockatoos; reptiles: lizards and snakes.

Aborigines (c. 60,000) are dark-skinned totem-worshippers, isolated race, renowned as trackers, well developed but of low mentality; weapons include the boomerang.

Politically, A. is a federal commonwealth, establd. 1901 with fed. cap. at Canberra. The members of the federation are Victoria, New South Wales, Queensland, S. Australia, W. Australia, and Tasmania. The Fed. Govt. administers the N. Territory (known as N. and Central A. for a few years), Papua (New Guinea), and the former Ger. colonies (Ger. New Guinea, Samoa, Solomon Is.) under mandate.

Production and Industry: Pasture is very important. A. has over 100 million sheep, Australian wool being among the best in the world. Cattle-raising and dairying are profitable. Principal crops are wheat, oats, barley, rye, and maize. Minerals include gold (mainly in W. Australia), silver, lead, tin, iron, and coal. Manufactures absorb over 400,000 hands.

Communications: Railway system hampered by the differences of gauge; fed. lines

(incl. new construction) are on standard gauge of 4 ft. 8½ in. Transcontinental rly. unites E. and W. Australia; N.-S. transcontinental line under construction. Air services have received impetus from successful England-Australia flights; several subsidized air-mail routes.

Discovery: The Spaniard Torres is credited with the first sight of A. in 1606; in the same cent. Dutch navigators (Pelsart, Tasman) and the Englishman Dampier made important discoveries; in 1770 Capt. Cook sailed up the E. coast; in 1788 a penal settlement was established at Botany Bay; settlers arrived abt. 1829. Gold rush in 1851.

Aviation, science and art of flight thr. the air by mechanical means. Navigation of air by any means involves aerodynamics, wh. treats of the motion of bodies in air and of air around solid bodies. In the construction of vessels for aerial navigation all parts, so far as possible, are shaped to give *streamline flow* (to avoid loss of power through forming eddies), and propulsion is effected by means of air-screws driven by internal-combustion engines of minimum attainable weight per h.p. The instruments include the compass, wireless direction-finder, barograph for indication of altitude (above sea-level), turn indicator (enabling straight course to be kept), air-speed indicator, and inclinometer; no wholly satisfactory instruments indicating speed relative to that of earth, or height above it, yet developed. First human aviation was by balloon, bodies lighter than air; still in course of development in form of rigid airships. Much greater development has taken place in mechanical flight, by which bodies heavier than air are sustained in it

and made to move in desired direction. Three principal systems are possible in perfectly still air: 1) wing-flapping as used by birds and insects, but never successfully by man; 2) propulsion of slightly inclined "plane" or aerofoil by means of screw, resulting pressure of air producing lifting force; universal in all aeroplanes but not found in nature. Minimum forward speed is necessary to sustain machine; if speed is lower, machine stalls. 3) Helicopter (*q.v.*). In turbulent air, *gliding flight* is possible, as used by eagle, albatross, and other large

birds and by man in "engineless" flying. Advantage is taken of upward currents and gustiness of wind. Upward currents exist near hills and cumulus clouds. See GLIDER.

HISTORY: Model of flying device to be attached to the person made by Leonardo da Vinci (*c.* 1500); research by G. A. Borelli, 1680; helicopter model by Sir George Cayley, 1796. Bee, hymenopterous insect living solitary or in colonies. The honey-bee, of which

there are several varieties, has long been cultivated for the sake of the honey produced. A colony consists of a queen (fertile female), whose sole duty is to lay eggs, several thousand workers (unfertile females), and some males (drones). The larvae are reared on honey and pollen in hexagonal cells of wax. Queens result from larvae fed exclusively upon a special substance provided by the workers. Sterile eggs produce drones, and fertilized eggs queens and workers. All the work of the colony is done by the workers. Swarming takes place when the colony becomes too crowded, the queen leaving with a number of workers, her place being taken by a newly emerged queen. A queen lives for several seasons; drones and workers are short-lived. The workers visit flowers for food and so aid in pollination.

Blood, nourishing fluid that flows through heart, arteries, and veins of the body; it consists of c. 80% water and contains proteins and salts in solution in the plasma or fluid part of blood; also contains red and white corpuscles, and fibrinogen wh. give blood its power of coagulation. In man, weight of B. is abt. one-twentieth of total weight of the body; the number of red blood corpuscles (*Erythrocytes*) is c. $4\frac{1}{2}$ to 5 million per c.mm.; the number of white corpuscles (*Leucocytes*) 7,000 to 10,000 per c.mm. Red hue of erythrocytes is due to *Haemoglobin* (q.v.); B. is bright red in arteries, where it is rich in oxygen, and dark in veins, where it is rich in carbonic acid. Erythrocytes play important part in respiration (q.v.), and leucocytes serve as a defence agst. infection and bacteria. B. is classified according to its actual constitution, wh. varies in different individuals; see B. GROUPS. **B., circulation of the**, discovered by William Harvey, physician, in 1628; uninterrupted flow of blood through blood-vessels of the body. The aorta rising from left ventricle of heart passes blood on to main arteries, wh. themselves split up into even smaller branches until they end in the fine capillaries (blood vessels as fine as hairs). These unite and form the slenderest veins, and these in their turn link up with the larger veins and finally with the two *venae cavae*. By these blood is sent to right auricle of heart and on through tricuspid valve into right ventricle, whence it passes into lungs through pulmonary artery, capillaries, and veins of the lungs, and thence into left auricle, flowing back into left ventricle through mitral valve. See HEART. **B. coagulation**, clotting of blood on reaching surface after a blood vessel has been opened, caused by fibrin (q.v.) in blood serum, wh. stops bleeding by forming clot; coagulation within blood vessel is called *thrombosis*. **B. groups** (physiol.): accdg. to Landsteiner, there are 4 groups into which blood of man may fall. By comparison of blood of the mother, the putative father, and the child, **B. g. tests** may assist in determining parentage of child. **B.-pressure**, the strength of flow of blood in arteries; measured by

Block and Tackle

pressure reqd. to stop flow in artery of arm; pressure depends on var. factors: age, constitution, phys. and mental repose, time of day, sex, etc.; B.-p. increased in arterio-

Calendar, 1) a system of measuring and dividing time, depending upon astronomical observations of the length of the year, month, and day. Most systems are based upon the length of the tropical or solar year and the number of days which this contains; hence no entirely satisfactory system has yet been evolved, for since the year contains 365.2422 days, an extra (or *intercalary*) day must be introduced about every fourth year (see LEAP YEAR). Another source of confusion is the traditional basis of the subdivisions of the year; a *month* is properly an interval dependent upon the periods of the moon, bearing no relation to the solar year; hence the discrepancy betw. a lunar month and a calendar month, the latter being the nearest practicable approximation to a twelfth part of the year; the *week*, probably through association with the seven planets known to the ancients, is almost universally fixed at seven days; but this period is exactly divisible neither into the month (exc. the common February) nor into the year, and this also militates against simplicity of the calendar. Various proposals for reform have been put forward, notably by the League of Nations Committee 1923; these involve division of the year into either 12 or 13 months, with an intercalary day falling outside any month, so that each year shall always start on the same day of the week. See JULIAN C.; GREGORIAN C.; JEWISH C.; REPUBLICAN C. 2) an almanack (q.v.); special list of important days throughout the year adapted to certain classes or interests, e.g., **University C.**, **Racing c.** **C. of cases**, list of persons for trial, esp. in superior criminal courts.

Carbides, compounds of carbon with metals and metalloids. Calcium carbide, CaC_2 , made by heating coke and lime in electric furnace, yields acetylene (q.v.) when mixed with water. Carborundum, silicon

carbide, SiC , very important abrasive (q.v.). Iron carbide, cementite, Fe_3C , important constituent of steel (q.v.). Aluminium carbide gives methane with water. Explosive acetylides are formed when acetylene is passed into ammoniacal copper and silver salt solutions.

Carbine, a short-barrelled firearm, princ. for mounted troops. **Carbineers**, cavalry armed with carbines. See CARABINIERS.

Carbohydrates, imp. group of organic chem. compounds, containing carbon (q.v.), with hydrogen and oxygen in proportion in wh. they exist in water, i.e., 2:1; number of carbon atoms present usu. 6 or multiple of 6. Formed in veg. kingdom by action of light and chlorophyll on carbon dioxide and water. Cs. may be divided into mono-saccharides (e.g., arabinose, glucose, and fructose), di- and tri-saccharides (e.g., cane sugar) and polysaccharides (e.g., starches and celluloses); indispensable foods of man and animals.

Carbohydrate diet, farinaceous foods with little fat or protein; opposite of *diabetic diet*, in wh. carbohydrate is strictly curtailed.

Carbolic acid: see PHENOL.

Carbon, (chem.) element, symbol C; at. wt. 12.00; sp. gr., 3.52; non-metal; occurs pure as diamond and graphite; impure as anthracite coal. All organic-chem. compounds contain C and hydrogen. **C. disulphide**, (chem.) CS_2 , compound of carbon and sulphur; sp. gr. 1.292; obtd. by passing sulphur-dioxide gas over heated charcoal; very inflammable; liquid used as solvent for oils and fats; vapour is a powerful insecticide. **C. monoxide**, (chem.) CO , colourless, odourless, inflammable gas produced by incomplete combustion of carbon (e.g., as coke, coal, or petrol); constituent of coal gas; produces gas and water gas (q.v.); very poisonous; see ANTIDOTES. **C. process**, in photo-printing; pigment, gen. carbon, mixed with gelatine, gum, or albumen, sensitized by bichromate. **Carbon**, or *autotype tissue*, used for printing, film then transferred to paper. See BICHROMATES. **C. tetrachloride**, (chem.) CCl_4 , compound of carbon and chlorine; colourless, heavy liquid; sp. gr. 1.5835; solvent of fats and oils; non-inflammable; used in "dry cleaning" and in fire extinguishers, and admin. internally for hookworm and liver fluke in sheep; vapour is very poisonous.

Carbonari (It. = colliers), a secret soc. wh. conspired agst. the Fr. rulers of Naples; after 1823 (as *Charbonnerie*) had headquarters in Paris; ceased to exist in 1841.

Carbonates, compounds of carbonic acid (q.v.); e.g., washing soda, chalk. Bicarbonates are acid carbonates, containing carbonic acid.

Carbonic acid, (chem.) CO_2 ; *carbon dioxide*; formed by complete combustion of

carbon and action of acids on carbonates; also a product of respiration and fermentation; heavy, colourless, odourless, tasteless gas; soluble in water and occurs naturally in many min. springs; forms carbonates in combination with metals (chalk and marble are carbonate of calcium). Solid CO_2 used as a refrigerant (dry ice).

Carboniferous, belonging to the geol. period between the Devonian and Permian; consisting of rock deposits, e.g., coal, formed in period of luxuriant land vegetation. See GEOLOGICAL FORMATIONS.

Carbonization, process of reducing organic matter to carbon by dry distillation, or by heating in chamber from wh. air is excluded; the volatile substances are thus driven off and only carbon remains.

Carborundum, *silicon carbide*, produced by heating silica-sand and coke in an elec. furnace; very hard; used as abrasive and for grinding metals.

Carboxyl, (chem.) sym. COCH , a radical, contained in all organic acids.

Carbuncle, hard, inflammatory swelling of skin; resembles a boil, but is larger, and discharges pus at several points.

Carburettor, appar. used in internal combustion engines burning light oil, for atomizing fuel nec. for generation of power and for produc. of mixture of vapour and air.

Carcase weight, of *bullocks*, without hide, head, legs and intestines; amts. to abt. 50 to 60% of live wt. In *pigs*, the disembowelled animal; abt. 70-90% of live weight.

Carcassonne, mediæval walled city (and cap.) of dépt., Aude, S. France; pop., 29,000; weaving; restored by Viollet-le-Duc, 1850-80.

Carchemish, anc. cap. of Hittites (*q.v.*); scene of extensive excavations during latter part of 19th century.

Carcinoma, cancer (*q.v.*).

Card, (tech.) machine for disentangling and rendering parallel textile fibres. **C. clothing**, leather with steel wire points, used to clothe cylinders of card. **C. index**, case of drawers containing loose leaves or cards on wh. addresses, catalogues, records of transactions, etc., can be system. kept and easily referred to.

Cardamine, bitter cress, plants of order Cruciferae; e.g., cuckoo flower, lady's smock, *C. pratensis*, with white and mauve blossoms.

Cardamom, dried, ripe seeds of *Elettaria cardamomum*, a plant growing wild in S. India and cultivated there and in Ceylon; *Mysore c.* most common. They contain a volatile oil, used in medicine as a carminative, also as an aromatic flavouring agent.

Cardamoms, mtn. range, Travancore, Madras, India; alt. up to 4,000 ft.; called after aromatic seeds (cardamoms) found on them.

Cardan universal joint, (mech.) device for connecting two rotating shafts so as to

allow the angle between them to alter in any direction; each shaft has a *fork*, the prongs of wh. pivot on opposite points of a rigid cross of metal, through which motion is transmitted.

Cardano, or (**Cardan**), Geronymo (1501-76), It. physic. and mathemat.; gained great medical reputation.

Cardanic suspension (*cardanic joint*), apparatus used on ships to keep compasses, lamps, clocks, etc., on horizontal plane when vessel is rolling; invented by Cardano; consists of 3 concentric rings, wh. can swing up to 90°.

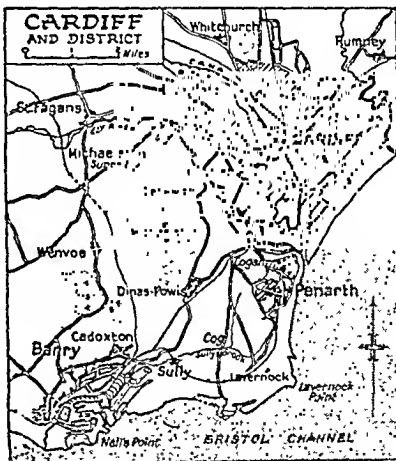

Cardanic Suspension

Cardboard, made by machinery from cheap raw matl. in sheets thicker than paper. In good qual. *C.*, e.g., for playing cards, sev. thin sheets of paper are pressed and glued together until desired thickness is attained. *Tarred felt* is paper pulp sheets treated with tar and lime.

COAL - WORLD PRODUCTION INCLUDING ANTHRACITE (IN MILLION TONS)
Average 1909-13

THE WORLD

COAL (U.S. PRODUCTION IN MILLIONS OF TONS)

Rate of incr. of prod. of coal retarded by competition of other fuels (esp. oil). U.S.A. still produces some 40% of total, with U.K. her nearest rival; but U.K. prod. declined since World War; during strike of 1926 she even imported 21,000,000 t. U.K. export of C. recd. impetus during occupation of Ruhr, but is now less than pre-war. Expts. do not include bunker coal shipped

palms, bracken, rushes, and (in Devonian and Silurian systems) seaweed, after these have been much changed by action of bacteria. Logically, it is mostly older than

chalk, and usu. occurs between sandstone and clay, in veins or beds varying in thickness from a few inches to 40 ft., in Eng., but reaching 200 ft. in India and France, and lying at depths from the surface to over 4,000 ft. Contains from 45% to 95% carbon, 4% to 7% hydrogen, remainder oxygen, nitrogen, and mineral matter.

Kinds of C.: **Anthracite**, purest, gives off hardly any gas or tar when heated; **Welsh steam-c.**, semi-bituminous; **bituminous c.**, gives off much gas and tar when heated, leaving coke (*q.v.*); **cannel c.**, very bituminous; **lignite**, nearest to peat (*q.v.*), which is first stage in formation of coal. C. is found in various parts of the world, in each of the post-Carboniferous stratified formations, either as true coal or lignite; but best C. always in carboniferous formation. Chief coalfields are found in Europe (esp. Gt. Brit., Germany, Belgium), Asia (China, India, Japan), America (U.S.A.), Australia (N.S.W. and Victoria) and N. Zealand (S. Isl.). Of total world production, U.S.A. provides abt. 50%, Brit. Emp. abt. 25%. **Economic uses:** C. is the most important fuel; it is the raw material for preparation of coal gas, and also of many by-products, e.g. coke, coal tar, naphtha, benzol, and carboic acid. **C. dust explosions:** see FIRE DANG.

Coal gas, is obtained by the destructive distillation of coal, which is heated in airtight retorts, gas passing through purifiers into gasometers; consists of c. 49% hydrogen, 34% methane (CH_4), 4% ethylene (C_2H_4), 9% carbon monoxide (CO), remainder being incombustible carbon dioxide (CO_2) and nitrogen. Gas is purified from tar, ammonia, cyanogen, sulphur compounds, and benzene, wh. are used to make valuable by-products, e.g. coal-tar dyes, artific. manures, etc. C.G. is used for cooking, heating, and lighting; also for driving G. engines. A ton of coal yields c. 1,000 cu. ft. of gas. **C.-gas poisoning**, caused by inhaling of carbon monoxide (*q.v.*) present in this gas, wh. enters the blood and combines with pigment hæmoglobin (*q.v.*), so that latter is no longer free to carry out its ordinary duty of transporting oxygen, thus causing subject to die of lack of oxygen.

Coal tar, a black, viscous product of coal distillation (high and low temp. carbonization gives different products, viz., **primary t.** at 300–400° C.; **secondary** at 800–1,100°). A mixture from wh. an enormous number of synthetic chemicals, e.g., dyes, perfumes, medicaments, flavouring essences, etc., are prepared; also light oils (benzol, toluol), medium oils (phenol, naphthalene), and heavy oils (creosote, anthracene, etc.), with a residue of pitch. Can also be used as fuel in Diesel engines (*q.v.*). **C.-tar dyes**,

prepared by chem. change of constituents of tar produced by distillation of coal.

Coalbrookdale, vill., Salop, Eng., on Riv. Severn, 10 m. S.E. Shrewsbury; pop., 1,500; iron works (fndd. 1709). See also MADELEY 1) and IRONBRIDGE.

Colour, visual sensation produced upon retina (q.v.) by light waves, varying accdg. to length of wave. Light of any single wavelength exhibits one of spectrum colours; all other colours are produced by mixture of spectrum colours; different mixtures may produce the same sensation; thus white is produced by all spectrum colours mixed together, but also by mixtures of red and green and of blue and yellow. Pure spectrum colours are said to be saturated; usu. there is mixture with more or less white (of any kind). Colours of objects are due to their absorbing some of the colours in white light and transmitting the rest to eye; thus red object is black or opaque to every colour but red, and transparent or white to red. Hence red object in green, etc., light appears black; red glass is opaque to green light. Mixture of paints produces colour or mixture of colours not absorbed from white light by any of the components, e.g., blue paint absorbs all but blue and green, yellow paint all but green and yellow; hence mixture of blue and yellow absorbs all but green. No ordinary artificial light is perfectly white (i.e., of same composition as sunlight), hence all colours appear different under artificial light. **C.-blindness**, defect of vision, usu. inherited, causing inability to distinguish betw. certain colours. In *dichromatism*, colours red and green are usu. indistinguishable; *monochromatism* is a rare condition in wh. power to see colour is absent and all objects appear grey. **C. filters** are coloured transparent screens standardized to transmit only light of desired range of wave-length. Used 1) in photography in monochrome of objects by day- or artificial light, to compensate for difference in colour sensitivity between human eye and

film; 2) in photography in colours by 'three-colour process (q.v.); 3) in illumination for effect, e.g., stage lighting. C. fs. are usually of gelatine coloured with special dyes; glass is more durable, but very limited as to range of colour. **C. photography**, prod. of phot. pictures in natural colour. Various processes: Lippmann [on princ. of interference (q.v.)]; Luziere (screen divided into minute areas of 3 different colours); Jougla, Dufay, etc. (films ruled and dyed; in positive picture eye recombines colours); use of "Lenticular" film (embossed on back with minute lenses), used in three-colour process (q.v.). For *motion pictures*, Lumiere process is best. **C.-printing**: see THREE-COLOUR PROCESS.

Düsseldorf, indust. tn. and riv. port, Rhineland, Germany; pop., 476,310; Academy of Art; iron, textiles, engineering, chemicals. Occupied by Fr. troops, 1921-25.

Dust-extractor, apparatus for sep. dust from air in factories, etc.; gen. by suction through pipes, dust being precipitated by centrif.

Eleonora Duse

force; filtering thr. filters (cloth, wire netting, woodwool, coke, etc.), water sprays, or high-tension elec. fields.

Dutch East Indies, Dut. archipelago betw. Indo-China and N. Australia; comprises *Great Sunda Isls.*, viz., Sumatra, Java, Borneo (exc. Brit. N. Borneo, Brunei, and Sarawak), Celebes; *Lesser Sunda Isls.* (E. part of Timor Portuguese); *Moluccas*; *Dutch New Guinea*; and several smaller groups. Area, 733,458 sq.m.; pop., 60,367,000 (207,800 Europeans). Exports sugar, rubber, petroleum, tin, tea, coffee, tobacco, copra, spices, medicinal herbs; rlys. 4,600 m.; 26 wireless stations; cap., *Batavia*, in Java. **D.-language**: see LANGUAGE SURVEY, *L. German*.

Duval, Claude (1643-70), highwayman of Norman birth; came to England at Restoration; notorious for his daring robberies and gallantry to women; hanged at Tyburn.

Duveen, Joseph, 1st Bn. D. of Millbank (1869-), Brit. art dealer, connoisseur, and benefactor; trustee of National Gallery and Wallace Collection; presented galleries for works of Turner and Sargent to Tate Gallery, and addtnl. galleries to Nat. Gall., Nat. Port. Gall., and Brit. Mus.; created bn., 1933.

D.V., abbr. *Deo volente* (Lat.), God willing.

Dvina, 1) most import. river (c. 500 m.) of N. Eur. Russia; rises in Vologda Forest and falls into White Sea; navigable six months; timber-floating. 2) Southern D. (c. 640 m.), rises near source of Riv. Neva and Riv. Volga, Russia; forms part of Russo-Polish frontier, passes Latvia and falls into Gulf of Riga.

Dvinsk, **Daugavpils**, fortress tn., Latvia, on Riv. Dvina; pop., 43,225.

D.V.M., abbr. Doctor of Veterinary Medicine.

Dvořák, Anton (1841-1904), Bohemian composer; widely known through his *New World Symphony* and *Humoresque*.

D.V.S., abbr. Doctor of Veterinary Surgery.

Dwarf, person, animal or plant considerably below normal size of species. **D. palm**,

Champeros humilis, fan-palm of S. Europe and N. Africa. The fibre from leaves is used to stuff upholstery, and in N. Africa (where it is known as *crin d'Afrique*) to make ropes. **D. pine**, *Pinus pumilio*, small pine, growing on mountain slopes up to c. 4,000 ft., in S.E.

Dwarf Palm Europe. **D. races**, or *pygmies*, prim. peoples found in Africa (negrillos—Aka and Vatva of C. Africa; Bushmen of S. Africa) and in S. Asia (negritos—Veddhas of Ceylon, Andamanese, Sunda Islanders); small in stature (under 5 ft.); repres. of least developed cul-

Dwarf Palm

tures; gen. hunters and collectors. **D. stars**, unusually small stars; of two kinds, red and white. *White Dwarfs* are always companions of red giants; their density is enormous, estmd. at 50,000 to 300,000. Consist of bare atomic nuclei (*q.v.*) and electrons. *Red dwarfs* are stars in last stage of evolution.

Dwt., abbr. pennyweight.

Dy, chem. symbol of dysprosium.

Dyaks: see DAYAKS.

Dyeing, process of imparting colour to materials, yarns, and fabrics by dipping in baths so that dye is taken up into the fabric, often previously treated with mordants (*q.v.*). Insoluble dyes are caused to adhere by adhesive substances, or are rst rendered soluble.

Dyer's broom, **Dyer's greenweed**, *Genista tinctoria*, leguminous shrub, flowers of wh. yield a yellow dye.

Dyes, coloured substances wh. can be used to impart colour to fibrous materials (textiles, leather, paper, etc.). Numerous *Natural D.* of animal and vegetable origin (indigo, murex, or Tyrian purple, madder, lac, saffron, fustic, logwood, cochineal) known from antiquity. *Modern Synthetic D.* made from coal-tar products.

Dyetskoye Selo, tn. in N. Russia (formerly Tsarskoye Selo), 15 m. S. of Leningrad, where Tsar Nicholas II and his family were imprisoned by Bolsheviks, Mar.-Aug., 1917. Imperial Summer Palace, rich in art treasures, now children's home.

Dyke, 1) ditch, channel for water made by digging; bank thrown up to exclude water from low lands. 2) (Geol.) Wall-like mass of mineral matter, filling up fissures in orig. strata.

Dykes, John Bacchus, Rev. Dyke, 1) (1823-76), Eng. composer of hymn-tunes, e.g., "Lead, Kindly Light."

Dynamics, (phys.) sc. of motion of matter under influence of forces. **D. of fluids**: *hydrodynamics*; of moving masses of gas: *aerodynamics*; of moving electricity: *electrodynamics*. Ant.: *statics*. See also KINEMATICS.

Dynamism, theory interpreting universe as manifestation of force.

Dynamite, explosive mixture of nitro-glycerol and diatomaceous earth (*q.v.*).

Dynamo, (elec.) electric generator, machine wh. generates an elec. current when driven by power (steam or Diesel engine, water turbine, etc.); consists of a *field magnet*, in the field of wh. an *armature* revolves; or armature may be stationary and field revolve (usu. in A.C. dynamo). Current is generated in armature by induction due to its motion in magnetic field. See ELECTRODYNAMICS.

Dynamometer, instr. for measuring output of power (in horse-power or kilowatts).

Simplest is **brake-d.**, in wh. engine or motor works against force of brake of some kind; brake is pivoted and prevented from rotating by spring or weight, which measures torque; revs. per min. of shaft are measured, and power output can be calculated.

Dynasty, race of kgs. of same line governing a partic. country.

Dyne, (phys.) the absolute C.-G.-S. unit (*q.v.*) of force, acting on 1 gramme produces an acceleration of 1 centim. p. sec. p. sec. Force of gravity on 1 gramme = 981 dynes; *see* **ERG**.

Dysentery, disease characterized by diarrhoea and passage of mucus and blood in stools, due to ulceration of large intestine. Two main types: **Bacillary d.**, caused by either of 2 groups of bacteria (*Shiga* or *Flexner*), wh. affect large intestine; **amœbic d.**, caused by *entamoeba histolytica* in caecum (*q.v.*) and large intestine. Both forms are infectious.

Dysmenorrhœa, painful and difficult menstruation.

Dyson, Sir Frank Watson (1868-), Brit. astronomer; chf. assistant, Royal Observatory, Greenwich, 1894; sec. of Roy.

Astronomical Assoc., 1899; astronomer-royal for Scotl., 1905, and for Eng., 1910.

Dyspepsia; *see* **INDIGESTION**.

Dysphagia, (med.) difficulty in swallowing. **Dysphasia**, difficulty of speech due to some affection of the brain.

Dyspnœa, difficulty in breathing; occurs in asthuma because the tiny tubes leading from the wind-pipe (or trachea) to the lungs become smaller in bore, so that the air gets through with difficulty; occurs in heart failure because the heart cannot pump the blood efficiently through the lungs, and the patient's tissues are deprived of sufficient oxygen.

Dysprosium, (chem.) sym. Dy, at. wt. 162.46; rare element occurring in gadolinite (*q.v.*), mineral found in Norway and Sweden.

Dytiscus, a genus of water beetle, carnivorous in both larval and adult stages; attacks small fish; strong swimmer.

Dzungaria, desert plain, centr. Asia, betw. Tien-Shan and Altai, 2,600-4,300 ft. abv. sea-lvl.; tn., Urumchi. Former Mongol kingdom, named after *Dzungars* or *Dsongars*, a Mongol race.

E

E., abbr., 1) east; 2) electricity (+E positive, -E. negative). **e.**, base number of Napierian logarithms (*q.v.*) (2.71829).

Eagle, 1) common symbol of imperial power, used on milit. standards of Rom. and Byzant. emps., adopted by Charlemagne (*q.v.*) as badge of Holy Roman Emp., thence developed into imperial symbol of former Germ., Austr. and Russ. emps. and of French Emp. (Napoleon I and III); also national emblem of U.S.A. 2) Gold coin of U.S.A., value \$10; no longer issued. 3) Birds of prey of Order *Aquilae* and of sub-family *Aquillina*.; true eagles include the golden, imperial, tawny, and spotted.

Golden Eagle

Eagre, a tidal bore (*q.v.*).

Ealing, munic. bor., Middx., Eng., residential sub. London; pop., 117,700.

E. and O.E., (commer.) abbr. Errors and Omissions Excepted.

Ear, 1) (anat.) organ of hearing. Sounds are received by external E. and conducted by the *auditory passage* to the *drum*, thence

Ear

- 1) Muscle of the Ear. 2) Auditory Canal.
- 3) Drum of Ear. 4) Small bones of Ear: Malleus, Incus, Stapedial Bone. 5) Arches. 6) Labyrinth. 7) Eustachian Tube.

through the middle ear or *tympanum*, by means of the vibrations of the 3 small bones of the ear (*see* INCUS) to the fluid in internal ear or *labyrinth*, which in its turn excites the ends of the auditory nerve. Tympanum communicates with nasal cavity by Eustachian tube (*q.v.*). The internal E. contains the *cochlea*, the organ in wh. the auditory

nerve-endings are located and the *semicircular canals*, which help in the maintenance of equilibrium. 2) (Bot.) Fruiting spike of any cereal.

Earl (*fem.* = **Countess**), third order of the Brit. peerage and of greater antiquity than any (pre-Conquest); at first attached to possession of particular lands, but later created by patent. **E.-marshal**, Brit. officer of State whose functions include the arrangement of ceremonials and, as head of the Heralds' College (*q.v.*), the granting of armorial bearings. Since 1672 held hereditarily by the Dukes of Norfolk.

Earl's Court, district of London in Royal bor. of Kensington. **E. C. exhibitions** were held almost continuously for 30 yrs.; last in 1914.

Early closing, movement originated in Eng. by Early Closing Assoc., in 1842, resulting in gradual establ. of Saturday half-holiday; weekly half-holiday for shop assistants made compulsory by Shops Act (1912); compulsory closing 8 P.M. wk-days., 9 P.M. Saturdays, with certain exceptions (1920 and 1928).

Early English, (archit.) style of Gothic archit. distinguished by tall, narrow windows with lancet-shaped heads, often in groups of 3, the centre one being highest. **E. E. Text Society**, fndd. in 1864 by Furnivall (*q.v.*) for editg. and publicatn. of O.E. and M.E. tracts.

Earth, 3rd planet (*q.v.*) in distance of orbit from sun, mean dist. being c. 93 mill. m., (variation betw. perihelion and aphelion distances, c. 3 mill. m.); a sphere slightly flattened at poles; *circumference* at equator 24,902 m.; at meridian 24,860 m.; *diameter* (equatorial) 7,926.677 m.; (meridional) 7,899.988 m.; *volume* (excl. atmosphere), c. 260,000,000,000 cu.m.; *weight* (excl. atm.), c. 6,000,000,000,000,000,000 tons; *surface area*, 196,950,000 sq. m. of wh. 139,440,000 is water and 57,510,000 land (*see* COLOURED MAP OF THE WORLD). Completes one rotation on polar axis (*q.v.*) in one sidereal day (23 hrs. 56 min. 4 sec.), one circuit of orbit round sun (in contrary direction to that of rotation) in an elliptical path in 365.25636 sidereal days (*q.v.*). *History*: may be considered astronomically (earth regarded as a member of the universe) or geologically. The latter method more properly historical,

since geology can throw light on course of earth's history; see GEOLOGICAL FORMATION. For divisions of the E. see LITHOSPHERE (solid part), HYDROSPHERE (water), and ATMOSPHERE (gaseous); also the *Continents*—Europe and Asia, Africa, N. and S. America, Australia, Antarctica, and *Oceans*—Atlantic, Pacific, Indian, Arctic, Antarctic. **E.'s crust:** see LITHOSPHERE. **E. currents**, elec. currents flowing thr. the earth. Such occur nat. with a voltage of abt. $\frac{1}{2}$ volt. p. mile. When due to leakage from elec. mains, tramways, etc., may be very destructive. **E. magnetism**, i.e., magnetic forces of terrestrial sphere, has regulating effect on magn. needle of compass. Its strength and direction at any one spot are given by: *total intensity*, *declination* (misdirection: E. or W. deviation of the magn. needle from astron. meridian), and *inclination* (tendency of free-moving magn. needle to the horizontal). Strength and direction of these forces are subject to daily and yearly variations, wh. increase to the intensity of *magnetic storms*; the result of sun-spots, tides, electric atmospheric currents, etc. Conceived as a magnet the earth possesses magnetic N. and S. poles. **E.-nut**, the peanut, seed of *Arachis hypogaea*, leguminous plant indigenous to Brazil, but cultivated in W. Africa and elsewhere; pods sink to the earth and ripen underground; seeds produce oil used in cookery, and sometimes to adulterate olive oil; they are also roasted and eaten. **E. pillar**, column of clay topped by stones; up to 100 ft. high; caused by rain washing away surrounding clay, leaving pillar protected by boulder at summit; common in Tyrol, Alps, etc. **E. temperature**, affected by air temp. only to a slight depth; then rises c. 1° C. for every 100 feet of depth.

Earthenware, objects of clay not fretted in firing, hence porous when unglazed. Glazed by throwing salt into kiln when firing nearly complete. Largely used for drain pipes and domestic utensils.

Earthquakes, concussions, vibrations, or upheavals of earth's crust, lasting only a few seconds; classified as *Tectonic* (90% of all Es.), due to displacement of steeper flexures of earth's crust, or to collapse of subterranean cavities; *Volcanic*, due to volcanic eruption; *Submarine*, in wh. the point of origin (*focus*) is under sea-bottom; the last usu. accompanied by destructive tidal waves. Investigation of Es. carried out in *seismological observatories*; measurement of tremors by *seismometer*; automatic recording by *seismograph*. Principl. earthquake areas: W. coast of S. Amer., Mediterran. countries, Japan, Asia Minor. *Memorable Es.*: Lisbon (1755), San Francisco (1906), Messina (1908), Japan (1923).

Earths, chemical designation of certain

oxides. See ALKALINE EARTHS; RARE EARTHS.

Earthwork, rampart, fortification made by throwing up a bank of earth, leaving a ditch in front and trench behind it.

Earthworm, earth-dwelling annelid, devours animal or plant remains; with this large quantities of earth are swallowed, and passing through the body help to form the so-called vegetable mould; the extensive burrowing operations also help to aerate soil.

Earwig, dark-coloured insect having, at the end of the abdomen, a pair of calliper-like pincers; metamorphosis incomplete; sometimes a minor pest in gardens. The common E. (*Forficula auricularia*) is found throughout Europe.

Easement, privilege held by deed or prescription by wh. one man has rights upon the property of another, e.g., right of way.

East, Sir Alfred (1849-1913), Brit. painter and etcher; R.A., 1913; *Passing Storm*; *The New Valley*; *A Haunt of Ancient Peace*; pubd. *Art of Landscape Painting in Oil Colours*.

East Anglia, anc. Anglo-Saxon kgdm. comprising mod. Norfolk and Suffolk. The N. part was the country of Boadicea and the Iceni in 1st cent. A.D. Kgdm. of E. Anglia, fndd. in 6th cent. by Angles from Schleswig. Subject to Mercia, c. 650-825, to Wessex, c. 825-870; conquered by Danes, 866; re-conquered by Edward the Elder, 920; thereafter part of England. **E. Flanders**, prov., Belgium, watered by rivs. Scheldt and Lys; 1,160 sq.m.; pop., 1,149,200; cap., Ghent.

E. Friesland, coastal region of Hanover, Ger., betw. Oldenburg and Holland; forms distr. Aurich; marshes and highland, cultiv. moorland. **E. Galloway:** see KIRKCUDBRIGHTSHIRE. **E. Ham**, co. bor., Essex, part Greater London; pop., 142,500.

E. India Companies, incorpor. of Eng. merchants founded 1600 to develop trade. Extensive political and military powers, subseq. (1773) much curtailed. Dissolved, 1858. A sim. Dutch East India Co. existed 1602-1795. **E. Indies**, collective name for India, Indo-China, and Malay Archipelago.

E. London, port, Cape Prov., S. Africa, at mth. Riv. Buffalo; pop., 27,800; pleasure resort; exports wool. **E. Lothian**, Haddingtonshire, marit. co., S.E. Scot.; area, 280 sq.m., pop., 47,400; rich plains, rising in S. to *Lammermuir Hills* (1,733 ft.); drained by Riv. Tyne. Famous agric. co.; co. tn., *Haddington*.

E. Prussia, N.E. prov. of Prussia, betw. the Vistula (W.) and Niemen (N.E.), the Baltic (N.) and Poland; 15,100 sq.m.; pop., 2,300,000; comprises part of the Baltic hill country, many lakes and large

conifer forests. Horse-breeding, fisheries, and amber; rye, oats, potatoes. Cap., *Königsberg*. From 13th cent. to 1525 a prov. of Teutonic Order, then secular Duchy, united to Brandenburg, 1618; overrun by Russia, 1914-15; separated from rest of Ger. by Polish Corridor, 1919; Memel distr. to Lithuania, 1920. **E. River**, strait, U. S. A., btw. bors. Manhattan and Bronx and bors. Brooklyn and Queens; 650 yds. across; continuation of Long Island Sound. **E. Semitic**: see LANGUAGE SURVEY, *Semitic*.

Eastbourne, co. bor. and seaside resort, Sussex, on Eng. Channel; pop., 57,400; 3 m. S.W. is *Beachy Head*.

Easter, annual festival commemorating Resurrection of Christ, celebrated since 2nd cent. in all Christn. communities. **E. Sunday** occurs on 1st Sunday after full moon following the vernal equinox and may fall on any date betw. March 22nd-April 25th. Proposals have been made to establ. a fixed date for Easter, and in 1928 the Easter Act was passed in Eng. to this effect; as it has not been accepted internationally, this Act has not been put into force.

Easter Island, in E. Pacific, 2,000 m. W. of Chile, of wh. it is a possession; 45½ sq. m.; pop., 250. Discvd. Easter Day, 1722, by Dut.; many prehistoric statues (3-36 ft.) and megalithic remains of undecided origin.

Easter Oratorio, by J. S. Bach (*q.v.*), 1736.

Eastern Alps, section of the Alps betw. Tyrol and Hungarian frontier; includes Tauern, Carinthian, Styrian, N. Tyrolese, S. Tyrolese (Dolomites), Carnic, and Julian Alps. **E. Churches**, collec. term for Christian bodies outside the Western patriarchate, not in communion with Rome: 1) Orthodox Gr.; 2) Nestorian; 3) Coptic; 4) Abyssinian; 5) Jacobite; 6) Malabar; 7) Armenian; and 8) Maronite churches. **E. Empire**: see BYZANTINE EMPIRE. **E. Rumelia**: see RUMELIA. **E. Turkestan**: see TURKESTAN.

Eastlake, Sir Chas. Lock (1793-1865), Eng. painter; R.A., 1830; P.R.A., 1850; keeper of National Gallery, 1843-47; director, 1855; *Christ Restoring Life to the Daughter of Jairus*; *Haidee*; *Ippolita Torelli*; etc.

Eastman, George (1854-1932), Amer. manuf. and philanthr.; inv. photo. roll film, 1884, and Kodak camera, 1888.

Eau de Cologne, perfume made from alcoholic vegetable extracts, rectified spirits and essential oils; said to have been first prepared by Johann Maria Farina, Ital. chem. living in Cologne; now extensively manuf. in Gt. Britain. **E. de Javelle**, Fr. name for weak solution of *hypochlorite of soda*; excellent antiseptic, deodorant, and bleaching agent. Prep'd. by passing elec. current thr. common salt solution. Known in Eng. as *Dakin's solution*, or *Ensol*. **E.-de-vie** (Fr.), water of life; brandy.

Eaves, (bldg.) portion of a roof projecting over walls.

Ebbfleet, place on Pegwell Bay, Kent, 3 m. S.W. of Ramsgate; landing-place (now ½ m. inland) of St. Augustine in 597 and (possibly) of the Saxons Hengist and Horsa (c. 450).

Ebbw Vale, urb. dist., at head Riv. Ebbw, Mon., 2 m. E. Tredegar; pop., 32,000; coal and iron.

Ebelians: see MUCKERS.

Ebenezer, (O.T.) stone erected by Samuel as monument of defeat of Philistines.

Ebert, Friedrich (1870-1925), Ger. statesman; took over govt. from Prince Max of Baden, 1918; elected 1st Pres. of Repub., 1919.

Eclecticism, faculty of selecting and combining ideas from var. systems; implies lack of original thought. Applied esp. in philosophy and art.

Eclipse, (astron.) total or partial obscuration of one heavenly body by interposition of another. **E. of moon**, such occultation of full moon by shadow of earth when latter lies betw. sun and moon; occurs when moon, in opposition, is near one of her nodes (q.v.); cone of shadow cast by earth (umbra), surrounding partial shadow (penumbra); begins East of moon, finishes on West. **E. of sun** occurs when new moon comes betw. earth and sun in or near the plane of the ecliptic (q.v.), partial, total, or annular, the last when apparently size of moon is less than that of sun and so leaves a ring of light round centr. shadow on sun; begins W. of sun and finishes East. **Frequency and recurrence of E.**: see SAROS.

Ecliptic, apparent path of sun round earth, i.e., earth's orbit round sun; so called since eclipses occur only when moon is in, or near, this plane. **Obliquity of E.**, angle betw. plane of E. and that of the equinoctial (q.v.); see INCLINATION OF EARTH'S AXIS.

Eclogue, strictly, a selection; short pastoral poem, esp. in dialogue, e.g., Virgil's *Eclogues*, Collins's *Persian Eclogues*.

Ecology, science of relationship of plants and animals to their environment.

Economic rent, net yield from agric. or other land after deduction of the costs of production of goods thereon produced and interest on capital invested. Land and sites

Eckener

Ecliptic

yield a varying econom. rent accdg. to quality and position; difference betw. var. amts. of E.R. is known as *differential rent*.

Economics, science of study of use of given means for the attainment of given ends in so far as conditioned by security. In its application, involves study of principles governing prodn. and distribn. of wealth, esp. as affecting welfare of community. Systematic study of E. began with Fr. "physiocrats" (*q.v.*) in 18th cent., devlpd. by Adam Smith (*Wealth of Nations*, 1776), D. Ricardo, (*Princ. of Pol. Econ. and Taxation*, 1817), J. S. Mill (*Princ. of Pol. Econ.*, 1848), and A. Marshall (*Princ. of Econcs.*, 1890), as well as on Continent (in Vienna and Lausanne) and in U.S.A.

Écru, light brown colour; that of unbleached linen.

Ecstasy, enthusiastic frenzy, enraptured state in wh., according to mystical doctrine, the soul "stands out" of itself and is united with God. In med., term applied to state of abnormal mental excitement, sim. to *catalepsy*.

Eel, fish with snake-like body, belonging to the genus *Anguilla*, spending the greater part of its life in ponds and streams, but on the approach of sexual maturity passing down to the sea and out into the Atlantic, until it reaches a region in the W. Atlantic, nearly equi-distant between the Leeward Islands and Bermuda, where, at a depth of some 3,000 fathoms, spawning takes place and the eel perishes. From the eggs emerge small, transparent, willow-leaf shaped larvae, known as *Leptocephali*, which grow rapidly, and on reaching about 25 mm. in length, migrate to the upper water layers and start on their long journey back to Europe, which takes three years. They arrive off the coastal banks of Europe towards the end of the summer of the third year, and during the autumn and winter undergo a metamorphosis from the leaf-form to transparent tiny round-bodied eels or *elvers*, and the following spring ascend the rivers in countless millions,

Eleatic school, group of Gr. philos. (Xenophanes, Parmenides, Zeno, etc.) at Elea (S. Italy) in 6th and 5th cents. B.C.; taught the unchangeable unity of the Divine, and that knowledge can be gained only by thought and not thr. the senses.

Elecampane, scab-wort, *Inula denium*, herbaceous plant grows 5 ft. high; large leaves, bright yellow flowers. Cultivated for medic. purposes in Holland, Ger., etc.; root is used in medicine as a diaphoretic, diuretic, and expectorant, princ. for pulmonary disorders.

Electors (of Holy Roman Empire), from 13th cent., 3 eccles. E. (abps. of Cologne, Mayence, and Treves); and 4 lay princes, (Palatinate, Saxony, Brandenburg, and Bohemia). Bavaria 8th elector, 1624; still later, Hanover and Hesse-Cassel added.

Electra, (Gr. myth.) dau. of Agamemnon and Clytemnestra; sis. of Orestes, whom she assisted in avenging their father's murder. Tragedies on the theme by Euripides and Sophocles; opera by Richard Strauss.

Electrical machine, appar. for generation of static elec. by friction or influence (Wimshurst, etc.). **E. units:** *volt*, unit of electric force or pressure; *ampère*, current strength; *ohm*, resistance. One volt sends a current of 1 ampère through a resistance of 1 ohm (Ohm's law). Quantity, *coulomb* = 1 ampère flowing for one second. Rate of energy supply or consumption, $Watt = 1$ ampère flowing under pressure of 1 volt. Energy, *Watt-second*, *Watt-hour*; *Kilowatt-hour* = 1,000 watt-hours = Brit. Board of Trade Unit. Consumption of any apparatus (lamp, motor) =

amps. \times volts \times hours
1000 B.O.T. units.

Electric eel, fish of family *Gymnotidae*, found in the fresh waters of the Guianas and Brazil, where it attains a length of six feet or more; has peculiar electric organs, which, in large specimens, are capable of inflicting powerful shocks. **E. heat**, generated by elec.

Electric Eel

current in a conductor, propor. to product of strength, tension, and duration of current. Princ. of all elec. cooking and heating apparatus. **E. incandescent**

(**glow**) **lamps**, glass bulb with vacuum or indifferent gas, cntg. a very thin filament of carbon or metal (tungsten) having a high resistance and becoming white-hot on passage of elec. current; 1st incandescent lamps invented (1854), by H. Goebel (1813-93); 25 years later invtd. anew by Edison. **E. lighting**, effected by means of incandescent or glow-lamps, arc-lamps, gas-discharge tubes (neon, mercury vapour). Glow lamps:

1) gas-filled, half-watt; 2) vacuum, metal filament, consumes twice as much current for same light as 1); 3) carbon filament, uses 7 times as much current. **E. rays**, large elasmobranch fishes of the family *Torpedinidae*, widely distributed in the Mediterranean, Red Sea, Indian Ocean, and N. and S. Atlantic. All have remarkable electric organs capable of producing electric currents similar to those from a galvanic battery; rays of moderate size, belonging to this family, can give off a charge sufficiently powerful to disable a human being. **E. trains** or **trams**, propelled by elec. current

distributed from centr. station to transformer sub-stations, conveyed by live third rail, or overhead wires, to driving-motors. For long distances, alternating current supplied to sub-stations, there changed to lower voltage, or by rotary converters into direct current. Advantages: Great acceleration on level and up-gradients; no smoke; utilization of low-grade coal or of water-power.

Electricity. All matter is made up of atoms of positive (*protons*, *q.v.*) and negative

(*electrons*, *q.v.*) electricity. Negative electrons permeate, like a vapour, all metals and metallically conducting bodies, and their motion constit. an elec. current; excess of them constitutes a negative charge; a

deficiency, a positive charge. In non-conductors they are bound, but can be separated by friction (frictional E., known to Grks. from friction of amber, Gr., *elektron*).

E. of like sign attracts, of unlike sign repels, other E. Moving E. generates a magnetic field, a moving magnetic field sets E. in motion, thus product. of current by *dynamo* (q.v.). Elec. current also prod. by chem. action (Volta, 1789, discov. of primary battery); acts on magnetic needle (Oersted, 1820; applied in elec. telegraph and telephone), produces chem. decomposition (*electrolysis*, q.v.), generates heat (applied in elec. furnace, domestic cooking, heating, and lighting). Varying current in one conductor generates current in neighbouring conductor (magnetic induction, Faraday, 1820; used in *transformer*, q.v.). When elec. and magnetic fields alternate rapidly in direc. and together *elec. waves* (q.v.) are prod. wh. travel thr. space with speed of light (Maxwell, Hertz; Marconi applied this princ. to wireless telegraphy, 1896). Light is of this nature, wave-length being extremely small. E. works (*generating station*) produces current by means of dynamos driven by steam or other engines, or water-power, etc., stores it, and transmits it to consumer municip., districts, etc.)

Electro-cardiograph: (med.): see **CARDIOGRAM**, and ill. **E.-chemistry**, sc. of relationship betw. chem. elec. actions. **E.-dynamics**, sc. of electr. in motion (forces betw. elec. currents and magnetic fields; electro-magnetic radiation, etc.). **E.-dynamometer**, appar. for measuring elec. power; usually moving coil pivoted or suspended, and acted upon magnetically by fixed coil, force being measured by tension of spring control. **E.-magnet:** see **MAGNETISM**. **E.-metallurgy**, production of metals and alloys by use of electricity; divd. into *wet* and *dry* E.M. Wet methods involve use of *electrolysis* (q.v.); chief branches: refining of copper, nickel, and lead. Dry involves use of *electric furnace*; use in metallurgy constantly increasing, owing to purity of product as compared with that of ordinary furnaces. **E.-motor**, machine revolving by means of an elec. current; converts electr. into mech. energy. **E.-plating**, deposition by electrolysis (q.v.) of one metal upon another (usu. nobler upon baser, e.g., gold, silver, nickel, upon copper, brass, iron). See **GALVANI**.

Electrocution, method employed in many States of the U.S.A. for inflicting capital punishment (q.v.); first legalized in New York, 1888. Criminal is bound in the "death

chair," electrodes are applied to his head and one calf, and sufficient electric current passed through his body to ensure instantaneous death.

Electrode, (phys.) metallicallly conducting body wh., in contact with other kinds of conductors (electrolytes, gases, living tissue), conducts electr. to them; when direct current is used, positive E. is the *anode* (q.v.); negative, the *cathode* (q.v.).

Interior of Electricity Substation

Electrolysis, decomposition of dissolved or fused chem. compounds (*electrolytes*) by elec. current, passed betw. two *electrodes* (q.v.) dipping into them. The *anion* (q.v.) is liberated at positive electrode (*anode*), the *cation* (q.v.) at the negative electrode or *cathode* (q.v.); e.g., in E. of water, oxygen liberated at anode, hydrogen at cathode. Incorrectly used for removal of hair by elect. destruction of root. **Electrolytic copper**, very pure copper, refined by electrolysis.

Electron, one of 2 fundamental constit. of matter; behaves in most respects like a minute particle of negative elec., but in other respects like a wave (see **WAVE MECHANICS**). Cathode rays in X-ray tube, and beta rays from radio-active substances (qq.v.), are both E.s moving with speeds approaching that of light, beta rays being the faster. Atoms of matter are made up of E.s and protons (q.v.). See **ELEMENTARY ELECTRIC CHARGE**; **NEUTRON**; **PROTON**.

Electrophorus, simple appar. for generating static elect. by "influence." Hist. interest only. **Electroscope**, appar. for detecting static electr.; gold or aluminium leaf repelled from fixed support when electrified; same princ. applied to measure elec. charge in **electrometer**.

Electrosmosis: see **OSMOSIS**.

Electrostatics, branch of science of physics wh. describes the phenomena exhibited by electricity at rest: attraction and repulsion of electrically charged bodies, capacity of condensers, dielectric constant, generation of electrostatic charge by friction and induction, etc.

Electrotherapy, curative treatment by (very various) electr. methods. See DIATHERMY; FARADIZATION; HIGH FREQUENCY; ULTRA-VIOLET; ACTINO-THERAPY; X-RAYS; IONISATION.

Electrotypes, facsimile printing plates of type or illustrations made by taking an impression in wax, depositing on this mould by an electrolytic process a thin copper sheet, and then backing up with type metal to make it the correct height from which to print. Any number of *electros* can be made from one original. An object (leaf, insect, etc.) may itself be covered with graphite and plated, negative copy thus obtained being used to form positive copy by plating.

Electrum, properly, a natural alloy of gold and silver, contg. 20-50% silver; also used for a kind of German silver (*q.v.*).

Elegy, orig. mournful song, accomp. by flute; expression of poet's own reflections; now esp. mourning song for dead friend.

Elektra, opera by R. Strauss (*q.v.*), 1909; see ELECTRA.

Elemental, basic, fundamental. **E. Spirits** of legend live in the Four Elements: Fire (salamanders), Water (undines), Air (sylphs), Earth (gnomes). **E. force**, natural force.

Elementary electric charge (abbr. *e*) = $4,774.10^{-10}$ electrostatic units of charge; smallest unit (atom) of positive or negative elec., being charge on a *proton* or *electron* (*qq.v.*). In electrolysis, this charge or multiple of it carried by each single univalent or multivalent *ion* (*q.v.*).

Elementary school, public, State-aided School in Gt. Brit. for elementary educ. of children from 5-14 yrs.; Educ. Act, 1870, created school boards, with power to provide schools out of rates and compel attendance; principle of universal compulsory free educ. adopted, 1891; school bds. abolished by Educ. Act, 1902; authority transferred to county, county borough, borough, and urban district councils; central senior schools now provide more advanced instruction for scholars over 11.

Elements, bodies wh. cannot be further decomposed by chem. means; 92 assumed, 90 known (see PERIODIC CLASSIFICATION). Many elements consist of 2 or more isotopes (*q.v.*); constitution of chem. compounds is shown by chem. formulæ in wh. number of atoms of each E. is shown, e.g., H_2SO_4 (sulphuric acid).

Elemi, pungent, resinous substance obt'd. from an E. Indian tree; used in ointments and varnishes.

Elephant, large, thick-skinned ungulate mammal in which the nose and upper lip are pulled out into a very long, flexible trunk, at the end of which lie the nostrils; a pair of incisors or front teeth in upper jaw grow throughout life of animal and form the long tusks; two species now exist: 1) the Indian, restricted to forest lands of India, African Elephant S.E. Asia (including Ceylon and Sumatra); 2) the African, inhabiting greater part of Africa south of the Sahara, the larger of the two; easily distinguished by its larger ears and arched fore-

head. **E. Butte Dam**, on Rio Grande, New Mexico, U.S.A. (1916); water-supply. **Order of the Elephant**, oldest Dan. order of knighthood, fndd. 1458.

Elephanta, small isl. in Thana Riv., India, betw. Bombay and mainland; rock-hewn temple caves.

Indian Elephant

Elephantiasis, tropical disease in wh. the lower extremities thicken and swell; caused by presence in the blood of *filaria*, worms wh. effect a stoppage in the flow of lymph in the lymphatic vessels.

Elets, tn. in Orel prov., Russia, on Riv. Sosna; pop., 43,240; grain trading; junction of five rly. lines. Farthest point attained by Tamerlane's horde, 1395.

Eleusinian Mysteries, anc. Gr. secret cult of Demeter (Ceres) and Persephone (Proserpine), at Eleusis.

Eleusis, ancient Gr. tn. in Attica, 20 m. W. of Athens.

Eleutherius, St., Pope (c. 176-89), accordg. to *Liber Pontificalis*, had relat. with Brit. kg. Lucius who wished to be converted.

Elevation, 1) (astron.) angular height of celestial body; 2) (gunnery) angular height of line of fire; 3) (generally) vertical rise above ground or sea-level; 4) (archit.) drawing, to scale (*i.e.*, not in perspective) of any vertical face of a building or part thereof.

Elevator, 1) machine for raising persons or material. For vertically travelling cages used in buildings, see **LIFT**. 2) (Aeronaut.) Hinged flap, usu. at tail of aeroplane, controlling angle of flight. Operated by the rudder bar (*q.v.*).

Grain Elevator

Bucket, endless chain with buckets, driven by power, for raising all kinds of solids and liquids. **E.-conveyor**, usu. bucket type, lifts material and also moves it horizontally. **Grain e.**, lift for corn, etc., in large quant. emplg. dredger-like bucket-conveyors, suction, comprd. air, worm conveyors, and similar contrivances, connected with large silos (*q.v.*).

Elf, personification of natural forces in legend; a diminutive fairy.

Elgar, Sir Edward (1857-), Eng. composer; oratorios: *The Dream of Gerontius*, 1900; *The Apostles*, 1903; *The Kingdom*, 1906; two symphonies, 1908 and 1911; "Enigma" Variations, 1899; overtures, *Cockaigne*, 1901; *In the South*, 1904; concertos: Violin, 1910; 'Cello, 1919; Symphonic Study, *Falstaff*, 1913; Violin Sonata, 1919; String Quartet, 1919; String Quintet, 1919; since 1924 "Master of the King's Musick."

Elgar

Elgin, 1) co. tn., Moray; royal burgh; pop., 8,800; cathedral. 2) City, Ill., U.S.A.; manuf. watches, cheese; pop., 36,000. **Elginshire**, see MORAY.

Elgin Marbles, sculptures from the Acropolis, Athens, acquired by 7th E. of Elgin (1766-1841), with permission of the Porte and bought by Brit. nation in 1816 for £36,000. Include portions of the Parthenon frieze and a Caryatid from the Erechtheum (q.v.); now in Brit. Museum.

Eli, (O.T.) priest at Shiloh, Judge of Israel (I Sam.).

Elia, pseud. of Chas. Lamb (q.v.).

Elias: see ELIJAH.

Elijah, 1) (O.T.) prophet (I, II Kings). Denounced Ahab and Jezebel; caused divine fire to consume his offering, thus triumphing over priests of Baal; taken up to heaven in fiery chariot. 2) (Mus.) Oratorio by Mendelssohn (1846).

Elimination, (math.) removal of a quantity from an equation.

Elinometer, instrument used for determining dip of rock strata.

Eliot, Chas. Wm. (1834-1926), Amer. publicist and educator; pres. of Harvard Univ., 1869-1919; pub. *The Religion of the Future*, 1909; *A Late Harvest*, 1924; etc.

E., George, pen-name of Mary Ann Evans (1819-80), Eng. novelist: *Adam Bede*, 1859; *The Mill on the Floss*, 1860; *Middlemarch*, 1872.

E., John (1604-90), Eng. missionary to Amer. Indians in Massachusetts, U.S.A.; transl. Bible into Algonquin language.

Elisabethville, cap. prov. of Katanga, S. Belgian Congo, on rly. to S. Rhodesia.

Elisha, (O.T.) prophet, successor of Elijah (I, II Kings).

suppression of vowel or syllable and hiatus (q.v.).

Élite (Fr.), the selected best of anything.

Elixir, in alchemy, magic liquid, said to change base metals into gold; also a cordial supposed to bestow perpetual youth on those partaking of it.

Elizabeth, St., 1) mother of St. John the Baptist; wife of Zacharias; feast-day, Nov. 5th. 2) **E. of Hungary** (1207-31), dau. of Andrew II of Hung. celebrated for piety, self-sacrifice, and good works; canonized, 1235.

Elizabeth, (Petrovna) Empress of Russia (1709-41-62), dau. of Peter the Great; joined Maria Theresa in War of Austr. Succession, 1747, and in Seven Years' War, 1759-61. Fndd. Univ. of Moscow. **E.**, Empress (1837-98), wife of Emp. Francis Joseph of Austr. (m. 1854); crowned Qn. of Hung., 1867; assass. at Geneva.

Elizabeth (1533-58-1603), Qn. of Eng., "the Virgin Queen"; dau. of Henry VIII and Anne Boleyn; extended Brit. commerc., polit. and naval power; signed death-warrant of Mary Qn. of Scots, 1587; defeat of Span. Armada, 1588.

Queen Elizabeth

Elizabeth, qns.-consort; **Belgium: E.** (1876-), wife of Kg. Albert of Belg. (1900); nursed wounded in World War. **Bohemia: E. Stuart** (1596-1662), dau. of James I of Eng.; wife of Fredk. V, Kg. of Bohemia and Elector Palatine. **England: E. Woodville** (c. 1437-92), wife of Edw. IV, mother of Edw. V; **E. of York** (1465-1603), dau. of Edw. IV, wife of Henry VII (1486); marriage united houses of Lancaster and York. **Prussia: E. Christine** (1715-97), wife of Fredk. the Great, Kg. of Pr. (1733). **Rumania: E.** (1843-1916), wife of Kg. Charles of R. (1869); authoress under pen-name of Carmen Sylva (q.v.).

Elizabeth, Princess (1926-), elder dau. of Duke of York and, at birth, third heir to the British Crown.

Elizabeth, tn., New Jersey, U.S.A.; pop., 114,600; fndd., 1665; coal, oil; sewing-machines, shipbldg., iron goods.

Elk, or **Moose**, largest living deer; male with palmated antlers; found in the swampy forests of N. Europe, N. Asia, and N. America; also in small numbers (preserved) in E. Prussia. See also WAPITI.

Elk Mountains, Colorado, U.S.A., part of Rocky Mtn. system (q.v.); North Italian Peak, 13,225 feet.

Ell, obsolete measure of length, varying in different countries

Elk (Moose)

(Eng., 45 in.; Flemish, 27 in.; Fr., 31 in.)

Ellesmere Island, isl., Canada, in Arctic Circle, W. of Greenland; 77,200 sq.m.; tundras; musk-ox, fox, reindeer.

Ellice Islands, Brit. archipelago, Pacific. E. of New Guinea; forms crown colony with Gilbert Islands (q.v.) since 1902; c. 14 sq.m.; copra, guano.

Ellipse, (geom.) an oval figure so curved that the sum of the distances of any point on its circumference (e.g., P) from two given points (F₁, F₂) is constant; these two points are called the *Foci* of the E.; the E. is a *Conic Section* (q.v.). **Ellipsis**, in grammar, the omission of a word which has to be supplied in thought. **Ellipsoid**, solid figure formed by the rotation of an ellipse round one of its two axes.

Ellis, Henry Havelock (1850-), Brit. physician, psychologist, editor, and author; *Studies in Psychology of Sex*, 6 vols., 1898-1910, etc.

Ellis Island, in Upper New York Bay, U.S.A., used as immigrant station.

Elora, vill. in the Ind. State of Hyderabad; famous rock-temples.

Ellore, tn., Madras, India; carpets, salt-petre, rice; pop., 38,000.

Elm, tree of the genus *Ulmus*, Ind. in most temperate regions; has clustered flowers; the common elm is *U. campestris*, and the Scotch or Wych elm is *U. montana*. A useful and ornamental, shady tree, which provides a valuable timber. Liable to be attacked by elm-leaf beetle (*Galerucella latifolia*), agst. wh. arsenic spray may be used.

Elman, Mischa (1891-), Russ. violinist; 1st appeared in London, 1905; naturalized, U.S.A., 1920.

Elmira, tn., New York State, U.S.A. on Chemung Riv.; pop., 27,400; railway plant; heavy machinery and accessories; reformatory; home of Mark Twain.

Elohim, (O.T.) name for God represent divine influence in material world. **Elohistic** parts of Pentateuch regarded as teaching natural religion; cf. *Janus* vii.

E. Long., abbr. east longitude.
E.L.O., abbr. *École spéciale des Langues Orientales Modernes* (Fr.), "Special School of Living Oriental Languages."

Elshelmer, Adam (1878-1902), Ger. painter and etcher; *Fall of Troy*, in Munich; *Philomena at Baccus*, at Dresden.

Elstree, see *Waltham*.

Elstree, vill., S. Herts., on Midle. bend; pop., 2,400; centre Brit. film industry.

Elswick, W. div. of Newcastle-upon-Tyne; engineering and ordnance works.

Eltham, par., N.W. Kent, 20 m. S.E. of London, part of Woolwich (q.v.); remains of *E. Palace*, res. of kgs. of Eng. from Henry III to Henry VIII; birthplace, John of Eltham, s. of Edward II (1316). **Carl of E.**, a title of Manquees of Cambodia.

Elutriation, method of removing coarse particles from powdered material, by suspending it in water or other liquid, when coarse material settles quickly.

Elvend, mountain in N.W. Persia, nr. Hamadan, 11,500 ft.; oil and iron-ore deposits.

Elver, larva of the eel; ascend rivers from the sea in vast numbers in the spring.

Ely, Isle of, admin. co., Eng., N. part of Cambs; area 372 sq.m.; pop., 77,700; assoc. with Here-ward the Wake. **Ely**, city and co. tn., on Riv. Ouse; 12th-13th cent. cath., with centr. octagon; pop., 8,200.

Ely Cathedral

Elymas, or Bar-Jesus (N.T.), sorcerer struck blind by Paul.

Elyot, Sir Thos. (d. 1546), Eng. diplomat and scholar; sheriff of Oxfordsh. and Berks., 1527; publ. *The Boke named the Governour*, 1531, dedic. to Hy. VIII, etc.; ambass. to Emp. Chas. V; M.P. for Cambridge, 1542.

Elysée, palace in Paris, seat of the Pr. President since 1871.

Elysium, paradise of Gr. mythology.

Elz., abbr. Elzevir.

Elzevir (1583-1712), family of printers in Leyden and Amsterdam, fndd. by Louis Elzevir (1540-1612) & 1584 and publishing till about 1712; they issued over 1,000 separate works.

Emanation (Lat. "flowing out"), fundamental principle of doctrine of Zoroaster, Neo-platonists and Gnostics that world is result of the overflowing of the Divine fullness; world represents, in graduated degrees of imperfection, the perfect Divine Being; thus E. offers itself as an explanation of presence of evil in the world.

Embalming, preservation of corpses against decay by balm, aromatic oils and spices, known to anc. Egypt, Ind., Assyria, Persia; see *various*; present method, by injecting various chemicals into the blood vessels.

Embargo, (Internat. law) order prohibiting foreign ships from entering a home port, or any such ship from leaving a port.

Palace of the President

Embarras de richesses (Fr.), embarrassment of wealth; the state of having too much to choose from.

Ember Days, days specially devoted in the R.C. and Angl. churches to fasting and prayer, viz., the Wednesday, Fri., and Sat. wh. follow Dec. 13th, the 1st Sun. in Lent, Whit Sunday, and Sept. 14th. The wks. in wh. these periods occur are **E. Weeks**, and the Sun. following each is a day of ordination of the clergy.

Embezzlement, fraudulent appropriation, to one's own use, of money or property held in trust for another; e.g., by a clerk, servant, or agent; penalty in Eng. law varies from seven years' penal servitude to imprisonment for not more than two years, with or without hard labour.

Emblem-books, selections of proverbs, sayings, fables, or reflections, chfly. on vanity of life, littleness of man, and nearness of death; usu. illustrated by wood-cuts; popular at time of the Renaissance.

- 2a) Choroid Membrane. 3) Retina. 4) Optic Nerve.
- 5) Iris. 6) Lens. 7) Anterior Chamber, containing aqueous humour. 8) Vitreous humour. 9) Blind spot. 10) Conjunctiva

transparent membrane in forepart of eye, shaped like a watch-glass and curved. Behind cornea, in front of eye, is the *iris*, the coloured diaphragm of eye, having in centre

a circular opening called the *pupil*, owing to opacity of eye-socket, appears black. Just behind pupil comes the crystalline lens of elastic structure wh. refracts incoming light-rays in such a manner that, having passed thr. the vitreous humor filling interior of eye-ball, a clear picture is formed at back of eye. The innermost lining of eye-ball is called the *retina*, because it contains a net-like distribution of nerves coming from brain and entering posterior section of pupil. The elastic structure of the crystalline lens enables eye to form pictures of objects both near and far; power of contraction and expansion possessed by pupil thr. action of muscular system of the iris permits of accommodation to various intensities of light. Power of seeing objects in depth can only exist thr. co-operation of both eyes. The eye is a delicate organ, easily damaged, and therefore protected partly by its position in bony cavity formed by the frontal bones and partly by the eyelids wh. act as blinds; these are lined on the inside by the *conjunctiva*. **E.-bright**, (bot.) *Euphrasia officinalis*, small herb with leafy spikes of white or violet flowers with yellow eye. Used in folk med. as an eye lotion. **E.-piece**, (opt.) lens or combinatn. of lenses in an optical instr. by means of wh. the observer views the image of the object formed in the focus of the field-lens. **E.-tooth**, either of the canines in the upper human jaw.

Finsteraarhorn, highest peak, Bernese Oberland, Switzerland; 14,000 feet.

Fiord: see FJORD.

Fir, genus of coniferous trees (*Abies*) the true fir, of wh. there are abt. 25 species, is distinguished from the Pine (q.v.) by having single needle-shaped leaves instead of sheathed clusters. **Silver F.** (*Abies pectinata*) grows abundantly in mountain regions of Europe; yields turpentine.

Firdousi (c. 939-1020), Pers. poet; *Shahnama*; a history in verse of Persia to 7th cent. A.D., including the episode of Sohrab and Rustam.

Fire, principle present in combustion producing heat and light; making of F. possibly man's first discovery. Earliest methods incld.: twirling a stick inserted in a groove betw. palms of hands, or rotating stick by means of thong twined round it and pulled backwards and forwards (drill). More advanced civiliztn. made use of flint and steel, spark struck from wh. ignited a piece of tinder (q.v.); use of burning-glass (q.v.) was

known to Chinese from an early date. Before introductn. of matches (q.v.) (early 19th cent.), it was customary to carry tinder boxes or pouches, i.e., receptacles provided with flint, steel, and tinder, often elaborately decorated. A match-igniting contrivance, pa-

ment in proportion to amt. insured. In Eng. F. ins. cos. came into existence after the Great Fire (1666), but none were establd. in Eur. until late 18th century. A person insuring agst. fire must have direct interest in property insured, *i.e.*, must be liable to incur loss by its destruction. See **INSURANCE**.

F.-proofing, process of rendering materials non-inflammable; for wood, fabrics, etc. (*e.g.*, canvas scenery and costumes in theatres), effected by painting and impregnating with chemicals, such as silicate of soda, borax, sal-ammoniac, ammonium phosphate, sodium tungstate. For full effect, chemicals must be forced into material by pressure or vacuum. **F.-works**, paper or cartridge cases of var. shapes cntg. mixtures of gunpowder-like character (charcoal, nitre, and sulphur) with salts giving bright flame colours (strontium, barium, thallium, sodium, etc.); incl. *rock-ets* (*q.v.*), *Catherine wheels*, *crackers*, *Roman candles*, etc. **F.-worship**, worship of fire as a deity, or as the symbol of a deity, common to both primitive and civilized races.

Fireless cooker, *cooking box*, thick-walled, lidded box, padded with materials of poor heat conduction (asbestos, hay, wood, wool) into wh. vessels containing food are placed to be cooked or kept hot. See **LAGGING**.

Fires of St. John, lit on Midsummer night in various parts of Europe in order to drive away evil spirits.

Firing, treatment in furnace of infusible bodies; *e.g.*, bricks, pottery, porcelain, to harden or glaze them.

Firkin, 1) small cask. 2) Brit. and U.S. liquid meas., used esp. of beer; 9 imperial gallons (10½ U.S. gallons), ½ kilderkin or ¼ barrel. 3) Brit. wt.; 56 lb. butter or 64 lb. soft soap.

Firman (Pers.), decree, licence; authority to travel etc., given by Oriental sovereign.

Firn, or *névé*, old, granulated snow of high mountains; the basis of glacier ice.

First aid, 1) **HEMORRHAGE**: *a*) due to injury: arrest flow of blood as far as possible by tightly bandaging with clean linen, muslin, etc.; do not wash the wound. If blood is spouting (from artery) apply tourniquet (*q.v.*) or pressure with fingers on artery against the bone on side nearest heart. *b*) *Internal bleeding* (into stomach, intestines,

lungs, etc.): absolute rest, call in doctor immediately. *c*) *Nose-bleeding*: make patient lie down, apply cold applications to back of neck. 2) **ASPHYXIA** (due to smoke gas, strangling, etc.): artificial respiration (*q.v.*). 3) **DROWNING**: stand patient on head for a

Flight, 1) *Natural*, process of moving in and thr. the air by means of wings, as performed by birds, bats, insects. Flying animals usu. possess strong, light bodies, adapted for cleaving the air; their weight is nec. for propulsion and stability; support is obtained by rapid motion of the wings, by wh. spaces round them become virtually solid bases. J. Bell Pettigrew, physiologist, was first to observe (1862) that wings of all flying animals are constructed on princ. of the screw and perform spiral movements when they vibrate. Wings of insects vibrate with extreme rapidity; in case of house-fly at rate of abt. 330 beats per sec. So-called flying-fish, flying-squirrel, etc., do not actually fly, but use their membranous expansions to dart into the air for a short distance. 2) *Mechanical*; see AEROPLANE; AVIATION, etc.

Flinders, Matthew (1774-1814), Eng. navigator; entered navy, 1789; explored Australian and Tasmanian coasts, 1795-99, and Gt. Barrier Reef, Gulf of Carpentaria, etc., 1801-03; apparently 1st to allow for deviation of compass from magnetic north in iron ships; *Voyage to Australia*, 1814.

Flinders, riv., Queensland, Australia, partly navigable; from Great Dividing Range to Gulf of Carpentaria. **F. Bay**, in S.W. of W. Australia. **F. Range**, mtn. chain of primitive rock formation in S. Australia, up to 3,100 ft. high. **F. Island**, in Bass Strait, N.E. of Tasmania.

Fling, nat. dance of Scot. and Den.; complicated measure of studied and class. order, with free use of arms, cries, stampings.

Flint, 1) seapt., Flintsh., Wales; castle; pop., 7,600. 2) City, Michigan, U.S.A.; motorcars, lumber; pop., 156,500.

Flint, dark grey or brown form of quartz, occurring in irregular nodules or lumps in

chalk, etc.; material from which weapons and tools were made during Stone Age; harder than steel; has property of producing a spark when struck by steel, hence used for striking a light and formerly for discharging firearms; powdered F. formerly an ingredient of glass, and still used in manufacture of fine pottery. **F. glass**, heavy glass of high refractive index containing lead, potash, and silica; used for optical achromatic lenses; see GLASS. **Flintlock**, system of ignition for firearms, 17th-19th cents. Flint on cock, striking steel of pan-cover, throws a spark into powder in pan.

Flintshire, marit. co., N. Wales (with *Maclor*, inland detached portion); area, 256 sq.m.; pop., 112,900; coast, from estuary Riv. Dee to mouth Riv. Geography, study of the earth's surface divided into *mathematical*, *physical*, and *political*. **G. Math. g.** includes astronomical G., which considers the form and size of the earth and its position in the universe, and geodesy (*q.v.*); **phys. g.** (*geophysics*) deals with the earth's phys. properties (density, weight, heat, magnetism, etc.) and its surface (land, water, and atmosphere), and with the life upon it; **polit. g.** with the distribution of polit. power over the earth. In its fullest application, G. includes the co-ordinated study of the inter-relationship of geogr. factors of diff. regions of earth's surface. **Applied or commercial g.** is concerned with productive and trade potentialities of various areas. The *G. position* of a place on

the earth's surface is determined by its *latitude* and *longitude* (*see both words*).

Geoid, the figure of the earth; an irregular sphere.

Geological formations. The table on preced. page gives approximately and in outline a conspectus of the earth's strata from the earliest (Archaean) times to the modern period from the European—and esp. the English—standpoint. It will be understood (*see GEOLOGY*) that there is no definite break betw. the various sections; that the rocks, minerals, and fossils characteristic of each period overlap; and that in very few areas will the whole of the series here given be found in its entirety.

Geological Survey of Great Britain, originated 1835 by Sir Henry Thomas de la Beche (1796-1855); collation and classification of all available geological data relating to structure of Gt. Britain. Many foreign countries and British Dominions and Colonies have founded similar institutions.

Geology, science that investigates the material (esp. mineral) constitution, structure, and history of the earth; divided into general and historical G. **General g.** deals with the processes and forces that have operated to bring about changes in the earth (*dynamical*), and with the material wh. constitutes the earth's crust (*petrology*). **Historical g.** attempts to trace the course of the growth of the earth, esp. of its crust, by investigating the composition and structure of rocks (*palaeontology*), and to classify rocks in geolog. eras according to their age (*study of rock formation and stratification*); for wh.

purpose fossils (*q.v.*) are of special value. *See GEOLOGICAL FORMATIONS.*

Geometers, Loopers, family of small to medium-sized moths, the caterpillars of wh. have legs on front and hinder segments only and so progress in a series of loops.

Geometric progression: *see PROGRESSIONS.*

Geometry, branch of maths. dealing with space and its relations. *Infinitesimal G.*, G. in wh. infinitesimal calculus is applied to curves and surfaces. *Co-ordinate or analytical G.*, includes study of co-ordinate systems, conics, algebraic curves, and surfaces. *Pure G.*, includes *elementary G.* (with topics of planimetry, stereometry, trigonometry, etc.); *projectional G.*, concerned with properties and relations of figures unchanged by projection and *positional G.* (concerned with changes in locus consequent upon a change in the determining equation). **Geometer**, a geometerician.

Geophysics: *see GEOGRAPHY.*
